# H.J. Weber $\mathcal{E}$ Sons Nursery Co. Nursery, Missouri 

E TAKE PLEASURE in presenting herewith our 1914 edition of "Weber's Guide" for the Spring and Fall seasons. We have endeavored to present some new features in our present publication, and trust that they will merit the approval of our customers and others who may receive a copy of this "Guide." The prices quoted herein cancel all previous lists and are for the year 1914. We reserve the right to change these prices at any time during the year, without notice, should conditions demand such changes. Our sincere thanks are extended to our patrons for their liberal patronage during the past years, and we hope that our manner of doing business has warranted a continuance of your valued orders in the future. To those receiving this Guide with whom we have never had business relations, we suggest a trial order; we aim to make our dealings with you satisfactory so as to number you among our list of regular customers.

Our Nurseries are located in St. Louis County, one and one-quarter miles from the city limits of St. Louis, on Gravois Road, in the heart of the truck gardening section of St. Louis County. Our soil is of the "Loess Formation," and is especially adapted to the growing of strong, healthy trees and plants, with plenty of fibrous roots.

Our packing facilites are the best of any nursery near St. Louis; we have a large frost-proof concrete storage house, $80 \times 120$ feet, 14 feet high, also storage cellar for bulbous stock. All packing and filling of orders is personally superintended by members of the firm in the best possible manner; no distance too great for our mode of packing. For spring shipments we carry a complete line of stock in our storage houses and can make shipments at any time during the winter and up to May 1st, and later according to weather conditions. In the fall we begin shipping about Oct. 15th. All orders are packed under cover, avoiding exposure to sun, wind, frost, etc.

We extend a cordial invitation to you to visit our Nurseries. Our office will be open on Sundays during the months of October, November, March, April and May, to accommodate customers who cannot come on week days.

Our plantings of ornamental stock are now the largest in the West, consisting of over 800 varieties. We are also importers of special Ornamental stock from Holland, France, England and Japan, and will be glad to quote on any stock you may require, as we have close business relations with reliable growers in these countries. You will find our list a very complete one. If there are any varieties you desire, and we do not quote them, it will be well to write us about them.

We make a specialty of supply stock for parks, cemeteries, club and institution grounds, and private places, large and small.

Soliciting your correspondence, inquiries and favors, we are,
Yours very truly,

## H. J. Weber \& Sons Nursery Co.

[^0]
# Before Making Up Your Order Please Read Carefully 

## Terms, Conditions and General Remarks

Clause 1-Terms invariably cash.
Clause 2-Remit by Post Office or Express Money Order on St. Louis, Mo.; Registered Mail to Nursery, Mo., or by Draft. Please do not send private checks unless drawn on some St. Louis Bank. Address all correspondence to H. J. Weber \& Sons Nursery Company, Nursery, Mo.
C. O. D. Orders must be accompanied by one-half the amount in cash.

Clause 3-Quotations. Prices in this list are for the quantities specified, except that 4 plants go at the 10 rate, 40 plants at the 100 rate, 400 plants at the 1,000 rate. Long lists of single varieties will be figured at the single rate. All orders are booked with the understanding that same shall be void should injury befall the stock from drouth, fire, frost or other causes beyond our control.

Clause 4-Guarantee. We exercise the greatest care to have every tree and plant true to name, and are ready on proper proof, to replace anything sent out by us that may prove untrue to label, free of charge, or refund the money paid for same. It is understood between the purchaser and ourselves that we are not to be held liable for any greater sum than that paid us for said trees and plants that prove untrue.

Clause 5-Free Packing. We pack free all orders sold at catalog prices, in the best possible manner, in bales or boxes with moss or excelsior.

Clause 6-No Cartage to Freight Depots, Express Offices or Wharfs in St. Louis.

Clause 7 -City of St. Louis and Suburban Deliveries. Our delivery wagons will make trips to the various sections of St. Louis and suburban points during the seasons. Orders to go this way must be left entirely with us as to the time of delivery. We combine a number of orders for one section in making these deliveries.

Clause 8-Special Deliveries. Parties desiring delivery on a certain day must order "Express Shipment" of their order and must pay Express charges, Order must be plainly marked "Special Delivery," and must give date on which delivery is to be made.

Clause 9-Railroad Facilities. We have the St. Louis and Memphis R. R. branch of the Frisco System within one-half mile of the office. Our station is Gravois, Mo. United States Express and car-load shipments are loaded here. This with the St. Louis facilities enables us to make prompt shipments on direct lines.

Clause 10-Early Orders. Customers should send in orders as early as possible; do not wait until the last minute and then expect to get immediate delivery. Wishing to serve our patrons in the best possible manner is the reason we ask for early orders.

Clause 11-Directions. Observe carefully that your Name, Post Office, County and State are plainly written on your order; also, state whether to be sent hy freight or express, and by what route. If no directions be given, we will use our best judgment. Use order sheet enclosed.

Clause 12-Errors. Any errors that may occur in filling orders must be reported within five days after receipt of goods. We will immediately correct same. Complaints entered after the above stated time will not be entertained.

Clause 13-Losses. All stock will be sent out in good condition. We do not guarantee stock to live, nor do we make up any loss whatever due to cli-
matic effects, or after culture on the part of the purchaser. Inmediately upon receipt of stock, open the package and ascertain the condition of same; check up the varieties, and compare with your order and report to us at once any complaints that are to be made, if any. If package has become frosted or dry enroute, treat as per instructions given under "Directions for Transplanting and Care of Trees, Shrubs, etc."

Clause 14 -Replacing. We do not replace stock that may die at the prices quoted in this list. Our responsibility ceases upon the delivery of stock in good condition. Complaints, if any, must be made within five days after delivery, when we will at once rectify or allow deductions. Hereafter, we will not permit any deductions from invoices unless the above conditions have been complied with.

Clause 15 -Insurance. A great many people want the nurseryman to stand all losses, whether due to climatic conditions, planting, after care, etc. For such customers we have decided to offer an insurance proposition, as follows: If the purchaser desires insurance on stock purchased, we will insure tha growth of such stock as we may deliver (excepting injury sustained by fire, cattle, horses, hogs, accidental, willful or malicinus destruction and floods) until the first day of September after delivery; provided that purchaser adds twenty per cent ( $20 \%$ ) to the amount of the purchase price and pays the total amount on or before day of delivery so that proper entry can be made on our books. Purchaser is to notify us promptly on the first day of September as to the losses claimed so that we can investigate and issue proper credit; under no conditions are dead trees or plants to be removed until we have had an opportunity to investigate in case we should desire to do so.

Clause 16 -Substitution. It is customary, should the supply of a variety become exhausted (as will occasionally occur in all establishments), to substitute in its place a similar sort, if there is such. Should it be desired for us not to do this, please state on your order, "No Substitution."

Clause 17 -Selections. Persons not acquainted with the different varieties can leave the selection to us, in which case we will select as if planting for ourselves.

Clause 18-Transportation. Every care is taken to secure safe and prompt transportation. The forwarders alone must be held responsible for loss or delay in transit.

Clause 19-Inspection. Our nurseries are annually inspected by the State Entomologist, and have been found free of San Jose Scale and other dangerous insects and diseases. A copy of certificate of inspection will be attached to every package that leaves our establishment.

Clause 20-Fumigation. Having built our own "Fumigatorium," we will fumigate with "Hydrocyanic Acid Gas," all stock sent to states where same is required hy law. Should any of our customers request us to fumigate their stock we will be pleased to do so free of extra charge. We are not to be held liable on account of damage to stock by fumigation.

Clause 21-Notice. The prices in this list abrogate previous quotations and are made on stock to be strictly first-class in the grades named. Please do not compare our prices with firms quoting on mailing size trees and plants only.

## General Directions for Transplanting Trees or Shrubs

Preparation of the Soil.-For fruit trees the soil should be dry, either natural or made so by thorough drainage, as they will not live or thrive on a soil constantly saturated with stagnant moisture. The soil should be well prepared by plowing at least twice beforehand, using a subsoil plow after the common one at the second plowing. On new fresh land, manuring will be unnecessary, but on lands exhausted by cropping, fertilizers must be applied, either by turning in heavy crops of clover, or well decomposed manure or compost. To insure a good growth of fruit trees, lands should be in as good condition as for a crop of wheat, corn or potatoes.

Preparation of the Trees Before Planting.-This is one of the most important operations to be performed, and one in which the most fatal errors are liable to be committed. The object of pruning is two-fold: First, to secure a head properly shaped and sufficiently open to the sun and air for the successful ripening of the fruit. Second, to prepare the natural balance between the roots and branches of the trees, that a healthy growth may be secured.

When young trees are removed from the nursery, roots are often broken or bruised, as will be the case however careful the digging, packing and transportation may be performed, and it becom'es necessary that the balance should be preserved by a proper and judicious pruning. This pruning should be adapted to the size and condition of the tree, and at the same time the form should not be forgotten. It should be so close as to enable the roots to supply the demand for sap from the remaining branches, and, at the same time, no growth already secured should be wasted.

In both Standard and Dwarf Trees, it will be usually found a safe rule to cut back, when pruning at transplanting, one-half of the growth of the previous season. The ends of the large roots should be made smooth with a sharp knife, where they have been roughly cut with the spade in digging, always cutting from the bottom of the root with an outward cut. New roots will form, and the injured parts heal more readily with this attention.

Planting with Dynamite.-We recommend the use of dynamite to every planter of trees, It is the up-to-date way of planting all kinds of trees.

1st. It is more economical than any other method.
2nd. It costs little if any more than digging a proper sized hole with the spade.

3d. Dynamiting the soil conserves moisture and prevents the big losses during dry seasons that are common with spade dug holes.

4th. Trees planted with dynamite make as much growth in two years as spade-set trees will in four years.

5 th. Dynamite breaks up the ground for 12 to 15 feet in diameter and 5 to 6 feet deep, kills all insects and fungous growth contained in the soil.

6th. Dynamite-set trees bear fruit from one to two years sooner than spade-set trees, and live longer.

Write to the E. I. Du Pont Nemours Powder Co., Wilmington, Delaware, and ask them to send you their "Instruction Book" on "Tree Planting" with dynamite.

Planting with Spade.-The holes should be dug large enough in the first place to receive the roots of the trees without cramping or bending them from their natural position. The tree having been properly pruned, should be held upright and the earth filled in around the roots, the finest and best soil from the surface being worked in among them, filling every
space and bringing every root fully in contact with it. When the hole has been half filled, pour in a pail or two of water; let this settle well, then finish the planting by placing soil enough about the trees to raise the surface somewhat higher than elsewhere, and press the soil carefuly down with the foot. Care must be taken against planting too deep; when the earth settles about the tree it should stand at the same height as when in the nursery. When set in Autumn, it is well to raise a mound of earth about the trees a foot or more in height. This will keep them from being swayed by the winds or thrown out by the frost during the winter. It should be removed in the spring. In planting Dwarf trees, the stock on which they are budded should be under ground.

Staking.-If trees are tall or in exposed situations, they should be supported by stakes to prevent injury from the action of the wind. Staking is done in the best manner by driving two strong stakes firmily in the ground, one on each side of the tree, about a foot distant from it, and fastening the tree between them with bands of straw or other soft material, so that it may be kept in an upright position without chafing until the roots obtain a firm hold upon the soil.

Mulching.-This is properly done by placing a layer of coarse manure or litter from three to six inches deep about the tree, extending one to two feet further in each direction than the roots. This keeps the ground moist and of equal temperature, rendering watering unnecessary, and is in all respects preferable to it. Trees properly mulched are more certain to live and make much greater growth than those which are not so treated.

Cultivation After Planting.-Here is the grand opportunity for the success of the skillful fruit-grower. It is not enough for him that his trees are of the choicest sorts, selected with regard to the climate and adaptation to the uses for which they are designed; that they are properly pruned and planted in dry, mellow soil, thoroughly enriched and prepared for their reception; protected from the winds by properly staking, and that they are in perfect shape and thriftiness. He knows very well that all this may be properly and well done, at great expense, and without further care be followed by an entire failure, so he watches their growth and defends them from their enemies that the cankerworm and caterpillar do not find safe lodgment among the branches; or the borer cut about them or the cattle obtain access to them by neglected gates or fence, and break down the branches. He is well repaid, for they thrive and grow rapidly; the shoots are vigorous; the bark clean and smooth, and soon a most abundant crop of superior fruit testifies to his wisdom and care. His neighbor, perhaps with better soil and equal care and experience in planting, having at the outset neglected these apparently trivial but really important matters, sees, instead of thrifty trees loaded with luscious fruit, the wreck of his hopes in a few mossy, scraggy, mis-shaped specimens of what he considers his ill-fortune, and hastens to remove. He, too, is justly rewarded for his neglect, as is his more prosperous neighbor for care.

Those who are obliged to plant trees in a field of grain or grass should see that all such are carefully mulched with rough manure, and that the ground is kept loose and moist about the trees. A hoed crop is greatly preferable in such plantation for the first five years. After a growth for this time, standard apple, pear, cherry and plum trees will grow and produce fairly in turf. The dwarf trees and peaches should be well mulched every year with loose man-
ure and the ground thoroughly cultivated. They will amply repay for this attention in the increased quantity and improved quality of the fruit.

Pruning.-Pruning after the first year should be varied according to the purposes of the planter and the variety of the tree. It should be trimmed as early as possible up to the height it is intended the future head should be, and the cutting off of large limbs may not in the future be necessary. The removal of large branches should be avoided in all cases whenever it is possible to do so, as decay is liable to commence at the point of separation and extend into the trunk; whenever it is done the wound should be carefully pared smooth and a coating of paint or grafting wax applied to protect it from the action of the weather. After the removal of lower branches until the head has reached the desired height, the only pruning needed is to remove such branches as are crossing or interfering with each other; and keep the heads in a symmetrical shape and well open to the sun and air. Trees should receive proper shape by judicious pruning and attention early in the spring of each year while they are young, and very little pruning will be needed afterward. When trees are to be pruned and trained for specific purposes and in a special manner, the orchardist will find full directions in the standard works on horticulture which may be read with great benefit and followed with success, but are beyona the scope of an ordinary catalog.

Grape Vines require a dry, mellow, well-drained soil, deeply worked and well enriched, with a warm, sunny exposure. In planting, give the roots plenty of room and settle the soil firmly about them. A strong vine may be allowed to grow the first season without pruning. In November or December following, the growth should be cut back to three or four buds; the next season, allow but two buds to grow, which should make canes seven to ten feet long and be cut back four to five feet the following winter, ready for fastening to the trellis. For the subsequent pruning of vines as well as trees, planters would do well to consult some practical work on the subject.

Berries should have a strong soil and be kept under constant cultivation. Mulching is of special value. Raspberries and Blackberries should have old wood cut out each year, and new canes pinched off when three feet high. Strawberries should be mulched late in the fall; uncover the crown early in spring; remove mulch after fruiting and spade in light dressing of manure.

Currants and Gooseberries need heavy mulching and pruning, so that new wood will have room to grow.

Roses should have a deep, rich, well-drained soil, and should be severely pruned every spring before the buds start, cutting back all the last growth to three or four buds, except climbing roses, which may be first allowed to partly cover the space desired. Old decayed branches should never remain. Every autumn compost should be placed around the stems of the plants and spaded into the ground in the following spring.

Treatment of Trees That Have Been Frozen in the Packages, Received During Frosty Weather, or After Long Exposure. Place the package, unopened, in a cellar or some such place, cool, but free from frost, until perfectly thawed, when they can be unpacked and either planted or placed in a trench until convenient to plant. Treated thus they will not be injured by the freezing. If dried from long exposure, bury entirely under the ground, soaking well with
water, or place in water from 12 to 24 hours, and prune more closely than ordinarily.

## Wintering Nursery Stock Procured in the Fall

In sections where the winters are very severe, it is not advisable to set out young trees and plants in the fall, but the practice of procuring them in the fall, covering them with earth during the winter and planting them in the spring is becoming more and more popular, as experience has demonstrated its advantages. In the fall, nurserymen are not hurried in their own planting; the season for shipping them is comparatively long, and the weather not nearly so changeable as in the spring. Railways are not so much hurried, and there is much less chance for injurious delays than in the spring. It being practicable to plant trees so procured as soon as the frost is out, they become thoroughly established the first season.

Some have an impression that trees dug in the fall and trenched in over winter are worthless. This is a great mistake. Peach and some other young trees, if left standing during their first winter, are frequently killed or injured by frost, while, if dug in the fall and treated as described below, they come through bright and uninjured.
To insure success, select a spot where no water will stand during the winter; have no grass near to invite mice. Dig a trench deep enough to admit one layer of roots, and sloping enough to allow the trees to lie at an angle of not more than 30 degrees with the ground.

Having placed one layer of the roots in this trench, cover them with mellow earth, extending well upon the bodies, and see that this is firmly packed, then add another layer of trees, overlapping the first until all are heeled in. As soon as this is done, cover the tops with evergreen boughs or corn stalks that they will be thoroughly protected from winds.

## A Table Showing the Number of Trees or Plants to the Acre

Distance

No. of Trees

Rule. - Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of feet in an acre ( 43,560 ), will give the number of plants or trees to the acre.

Distances for planting various fruits will be given under respective headings in this catalogue.

## Formulas

## For Making Various Insecticides and Fungicides

#### Abstract

Ammoniacal Copper Carbonate. Copper carbonate ...................... 6 ounces Ammonia, 26 deg. Baume, enough to dissolve copper, no more. Water Dissolve the copper carbonate in the ammonia (it will take about three pints of the stronger grade) and dilute with water to 40 or 50 gallons, for fungous diseases. It does not discolor fruit and may be applied even when the fruit is ripening. Often used for apple bitter rot.

## Arsenates.

Paris green or London purple........... . 1 pound
Fresh lime . ............................ . . 3 pounds Water ................................. 175 gallons
Make a paste of either Paris Green or London purple with a little water, gradually dilute it by adding more water. When it is of liquid consistency, pour it into the water. If the poison is put dry into a barrel of water, it will collect in lumps and cannot readily be stirred into the water. For insects that chew, the Paris green is less liable to burn foliage, so it is sometimes preferred to the London purple. The London is more readily kept in suspension in the water, however. In applying either of these poisons, the liquid should be kept stirred so they will not settle.

These poisons are generally applied in Bordeaux mixture instead of water.

## Bordeaux Mixture. ixture

Copper sulphate
Lime (unslacked) $\qquad$ 4 pounds
. . . . . . . . . . . . . . 6 pounds Dissolve the copper sulphate by putting it in a 4 all 4 gallons) so the bottom of the bag just touches the
water. When it is dissolved, dilute to 25 gallons. Slack the lime and dilute to 15 or 20 gallons, then pour these two together and add water to make 50 gallons. Do not fail to dilute both lime and copper sulphate before they go together, or chemical action will injure the solution.

The Bordeaux Mixture is used for most fungous diseases, and is our best general fungicide. The sediment from it remains on the plant for some time, so fruit should not be sprayed with it near the time of ripening.

The amount of copper sulphate and lime may be increased to 6 pounds each or diminished to 3,2 or even 1 pound each. (The weaker mixtures have proven about as successful with us for everything, except bitter rot, as the 6 -pound solution.)

## Hellebore.

Fresh White Hellebore.................... 1 ounce
Water ..................................... 3 gallons
Apply when thoroughly mixed. This poison is not so energetic as the arsenites and may be used a short time before the sprayed portions mature. It is the best remedy for rose slugs.

## Potassium Sulphide Solution.

Potassium sulphide, liver of sulphur. $11 / 2$ pounds
Water . . . . . . . . . . . . . . . . . . . . 40 to 50 gallons
Dissolve the potassium sulphide in the water. For bitter rot of apples and for currant and gooseberry mildew.

## Quassia and Tobacco Solution.

Quassia Chips . . . . . . . . . . . . . . . . . . . $11 / 2$ ounces Tobacco Stems ................................ 3 ounces Water . . . . . . . . . . . . . . . . . . . . . . . . . .about 3 gallons
Soak the quassia chips and tobacco each in a separate bucket, containing one gallon of water, over night. The next morning boil the quassia for 15 minutes in the water in which it has been soaking. Pour the quassia and tobacco water together and dilute to three gallons for plant lice. It has, with us, given best satisfaction for plum aphis.

## Kcrosene Emulsion.

Whale Oil Soap........................ . . . $1 / 2$ pound
Boiling water ................................. . . . . 1 gallon
Kerosene . . . . . . . . . . . . . . . . . . . . . . . . . . . 2 gallons
Dissolve the soap in the water, add the kerosene, and churn with a pump for 10 minutes. Dilute with 10 gallons of water before applying. Use strong emulsion for all scale insects. For insects which suck, as plant lice, mealy bugs, red spider, thrips, bark lice, cabbage worms, currant worms and all insects which have soft bodies can be successfully treated.

## Lime-Sulphur Salt Solution.

Put the lime into the kettle and add three or four buckets of hot water. While the lime is boiling, add the sulphur and stir briskly. If the contents of the kettle are now likely to boil over, add another bucket of hot water. When the lime and sulphur have boiled for a few minutes, add the salt, and cook until the solution becomes dark amber in color. Usually an hour is sufficiently long to cook the mixture, but if it is not of the right color at this time, the cooking should be continued. When the mixture has been properly cooked, there ought not to be more than a pint or so of residue left in the kettle. At the beginning of the cooking, the solution should be stirred continually, but after a few minutes, occasional stirrings will suffice. When the cooking is completed, the solution should be strained through a fine sieve, made for the purpose, or through a gunny sack into the pumping barrel or tank and made up to 50 gallons of hot water. The mixture should be applied while hot and preferably as soon after making as possible, always bearing in mind to keep it well agitated while the pump is in operation. All pumps and accessories used in applying the mixture should be well washed and cleaned after each time of using.

## Instructions on Spraying and When to Apply

## Never Spray Trees When in Bloom

## Scale Insects

on fruit trees, shrubs, vines, roses, etc.: All trees badly infested should be severely pruned before spraying.

First Application-Scalecide 1 to 16, lime-sulphur or kerosene emulsion. Use in fall as soon as the
leaves drop; we advocate fall spraying for scale insects wherever possible.

Second Application-Repeat in spring if necessary before leaves appear with Scalecide, Kerosene or Lime Sulphur.

Third Application-If spraying has been neglected, trunks and limbs may be washed with 1 part Scale-
cide to 16 parts water where there is no foliage. The foliage may be sprayed with 1 part Scalecide to 35 parts water in the afternoon of cool, cloudy days.

## Nursery Stock.

A safe rule would be to dip all trees before planting, in a solution of one part Scalecide to 20 parts water, to insure against Scale Insects. We use this precaution on all stock purchased by us, from other sources.

## Apple Scab, Bitter Rot, Biting Insects.

First Application-When buds begin to swell, Bordeaux or lime-sulphur.

Second Application-Just before flowers open. Bordeax or lime-sulphur.

Third Application-As last flowers are falling. Bordeaux and Arsenites.

Fourth Application-10 to 12 days later. Bordeaux and Arsenites.

Fifth Application-10 to 15 days later, Bordeaux.
If bitter rot appears, use Am. Copper Carbonate or Potassium sulphide every ten days until fruit is picked.

Cabbage Worms, Aphis, Harlequin Bug.
First Application-When insects are first seen, Scalecide, 1 to 40.

Second Application-10 days later, repeat if not heading.

Third Application-10 days later, hot water, 130 degrees, if heading.

Fourth Application-Repeat third when necessary. Plant catch rows of radish or mustard, and spray with strong kerosene emulsion as insects gather.

## Currant, Gooseberry-Mildew, Worms, Aphis.

First Application-When leaves appear, Bordeaux.
Second Application-10 days later, Bordeaux; Hellebore for worms, Quassia and tobacco for aphis.

Third Application-Repeat second when necessary.
Fourth Application-Ammonical copper carbonate after fruit is one-half grown.

## Evergreens-BagWorms.

First Application-When bag worms first appear, arsenites, 1 pound to 300 gallons water.

Second Application-Repeat first if necessary.
Third Application-If worms persist until wood is ripe and weather is dry, add more arsenites.

Pick bags containing eggs in winter. To tell when worms hatch, hang bags containing eggs in bottle, with bits of colored cloth.

## Grape-Fungous Diseases, Biting Insects.

First Application-When buds begin to swell, Bordeaux.

Second Application-Before flowers open, Bordeaux and Arsenites.

Third Application-When flowers have fallen, repeat second.

Fourth Application-10 to 14 days later, Bordeaux.
If rot appears after fruit is half grown, use Am. Copper Sulphate.

Sacking bunches in manila sacks gives finer specimens for show table.
Nursery Stock-Fungous Diseases, Bag Worm and May Beetle.
First Application-When buds begin to swell, Bordeaux.

Second Application-When leaves appear, Bordeaux and Arsenites.

Repeat second every 14 days if necessary.
Cut out and burn fire blight if it appears.
Peach, Nectarine, Apricot-Fungous Diseases.
First Application-When buds begin to swell, Bordeaux.

Second Application-Just before flowers open, Bordeaux.

Third Application-When flowers have fallen, Bordeaux. Arsenites may be added to Bordeaux for curculio.

Ten days later repeat third. Am. Copper Carbonate every ten days for rot, after peaches are nearly grown. Jar trees for curculio during early morning or evening after fruit sets.

## Pear-Leaf Blight, Scab, Biting Insects.

First Application-When buds begin to swell, Bordeaux.

Second Application-Just before flowers open, Bordeaux.
Third Application-When flowers have fallen, Bordeaux and Arsenites.
Ten to 14 days later, repeat third.
Ten to 14 days later, Bordeaux.
Cut out and burn fire blight if it appears.

## Plum-Fungous Diseases and Curculio.

First Application-When buds begin to swell, Bordeaux.

Second Application-Just before flowers open, Bordeaux and Arsenites.

Third Application-When flowers have fallen, Bordeaux and Arsenites.
Ten to 14 days later, repeat third.
Ten to 14 days later, repeat third.
Jar trees for curculio morning or evening after fruit sets. Am. Copper Carbonate solution every week from full size until gathered.

## Potato-Scab, Blight, Beetles.

First Application-Soak seed for scab in corrosive sublimate solution, 2 oz . to 16 gals. water for $11 / 2$ hours.

Second Application-When beetles appear, arsenites.
Third Application - When rines are one-half grown, Bordeaux; Arsenites for beetles.

Ten to 14 days later, repeat third.
Ten to 14 days later, repeat third.
Quince-Fungous Diseases, Biting Insects.
First Application-When buds begin to swell, Bordeaux.

Second Application-When fruit has set, Bordeaux and Arsenites.

Two weeks later, Bordeaux.
Two weeks later, Bordeaux.
Repeat in two weeks, if necessary.
If rot appears at time of ripening, spray with Am. Copper Carbonate solution. Destroy all decayed fruit.
Raspberry, Blackberry, Dewberry-Fungous Diseases.
First Application-When buds begin to swell, Bordeaux.

Second Application-When leaves are opening, Bordeaux. Cut out all rusted leaves.

Third Application-Two weeks later, repeat second application.

Fourth Application-Before fruit is full size, Am. Copper Carbonate solution.
Fifth Application-After fruiting, Bordeaux.
Spray frequently with Bordeaux for fungous diseases that appear after fruit is gathered.

Rose-Fungous Diseases, Slugs.
First Application-When leaves appear, Am. Copper Carbonate.

Second Application-If slugs appear, Hellebore.

Third Application-If fungi appear, repeat first application. If slugs appear, repeat second application.

## Strawberry Rust.

First Application-When flowers first begin to open, Bordeaux.

Second Application-When first fruit sets, repeat first application.

Third Application-Before fruit ripens, Am. Copper Carbonate.

Fourth Application-When last fruit is harvested, Bordeaux.

Fifth Application-Repeat fourth application, if necessary.

## Insecticides and Fungicides <br> Terms-Cash with Order

## Pratt's Scalecide

Best remedy for scale and sucking insects. Manufactured by B. G. Pratt Co., New York. We are Western distributing agents for this well-known insecticide. Send for special circular. One gallon makes 16 to 20 gallons of spray. Prices, f. o. b. St. Louis, Mo.

# Fruit Department Standard Apples 

The culture of the apple is one of the leading enterprises of the United States. Its period, unlike that of other fruits, extends nearly through the year. By planting judiciously, a constant succession can be easily obtained of this indispensible fruit for market and for family use. We believe that no one with proper soil conditions and ample land should hesitate to plant a good apple orchard at once; the population of the United States is growing by bounds and the planting of apple orchards has not kept pace, hence the high prices now being received on the market for apples. Good apples are worth as much or more today than the best California oranges, and you don't have to go to California to grow them either. All you need is proper soil conditions, a little backbone and a determination to give your trees proper attention after planting and your success is assured.

Plant standard apple trees from 30 to 40 feet apart each way, according to the nature of the soil.
At 30 feet apart it takes 48 trees per acre; 40 feet apart it takes 27 trees per acre.
Our apple are all "crown grafted or budded" on branched roots. Grown on new land and free from insect and fungous diseases. None better grown anywhere.

## Summer or Early Varieties

Benoni-A fine eating apple, striped and splashed with red. Tree upright grower. Early bearing.

Carolina Red June-Medium size, red; flesh white, tender, juicy, sub-acid; an abundant bearer. July. Tree an upright grower.

Duchess of Oldenburg (Russian)-Medium to large; striped, mostly red. Best summer cooking apple; tree hardy, early and a good bearer. July and August. Tree upright grower.

Early Harvest-Medium to large, flat, pale yellow; good. Tree a fair grower and bearer. July.

Fameuse (Snow Apple)-Medium to large, a handsome deep crimson, white fieshed apple of high flavor and best quality; very productive. August and September. Tree is a strong, upright grower.

Red Astrachan-Medium size, round, dark red on yellow ground; good market sort. Flavor fair. Good for cooking. Tree upright in growth. August.

Yellow Transparent (Russian)-Skin clear white, changing to pale yellow when fully ripe; flesh white, tender, sprightly sub-acid; good early bearer. July. Tree an upright grower.

## Autumn Varieties

Fall Pippin-Large, beautiful yellow when fully ripe. Flesh tender, rich and of good quality. Tree hardy, vigorous and long-lived. September.

Maiden Blush-Large, flat, pale yellow; beautiful blush, mild, sub-acid, valuable for market, cooking and drying. September.

Rambo-Size medium, oblate, skin smooth, yellowish white in the shade; streaked and marbled pale yellow and red in the sun, and speckled with large rough dots; very tender, rich, juicy, mild, subacid. Very good. Tree vigorous. Tender in some localities. September.

Wealthy-Fruit medium, oblate, skin smooth, whitish yellow, shaded with deep red in the sun,
splashed and spotted in the shade. Flesh white, tender, juicy, sub-acid, very good. September and October. This variety is, in our estimation, destined to take the lead of all other fall apples; it is parexcellence. Should be in every orchard.

Wolf River-Large, greenish yellow, flushed with crimson. Flesh white and rather coarse. Valuable as a show apple on account of size. September.

## Early Winter Varieties

Grimes Golden-Medium to large, roundish oblate, slightly conical, large specimens oblong. Skin yellowish white, with a mild sub-acid agreeable good to best flavor. Tree a good grower and early annual bearer. No orchard should omit this variety. October.
$\checkmark$ Jonathan-Medium size, unless thinned on tree, when it becomes a fair size; form roundish conical; skin thin and smooth, the ground clear light yellow, nearly covered with lively red stripes and deepening into brilliant or dark red in the sun; flesh white, rarely a little pinkish; very tender and juicy; mild, sprightly vinous flavor. Tree slender and spreading. October.

Northern Spy-Fruit large, roundish, oblate, conical; greenish yellow, covered with light and dark stripes of purplish red; sub-acid, delicious flavor. Tree a strong, upright grower. September and October.

Talman Sweet-Medium or rather large, roundish, oblate, slightly conical. Color clear white yellow with a clear brownish line from stem to apex; flesh white, firm, rich, very sweet. Tree vigorous, hardy and productive. October.

## Winter Varieties

Arkansas Black-Large, very dark red, smooth, roundish flat, lightly dotted with white; flesh yellow, sub-acid; long keeper. November to April.

Baldwin-A celebrated winter variety in the east. Large size, bright red; flesh yellow, juicy; very productive where it thrives.

Ben Davis-Large, roundish, oblong, red striped, very handsome. Mild, sub-acid, not rich. Tree very vigorous, hardy and productive. This is one of the safest and most profitable market apples grown in this country at present. October to March.

Gano-Tree very healthy, vigorous, hardy, having stood 32 degrees below zero without injury. A rapid grower, large and spreading in orchard. Color bright red without stripes or blotches. Similar but superior to Ben Davis. Large and even in size. Prolific bearer and a good keeper. October to March.

Gilpin or Little Red Romanite-Tree very vigorous and fruitful. Fruit medium size. Roundish oblong; skin very smooth and handsome, richly covered with deep red and yellow. Flesh yellow, firm, juicy and rich; good keeper. November to May.

Huntsman-Fruit large, flat, deep yellow; very mild, sub-acid. fine grained. Very good. Valuable for family and market. Tree fair grower and good bearer, but does not bear heavily while young. October to April.
Ingram-Seedling of Rawles Jennett.. Originated with Martin Ingram of Green County, Missouri. Fruit medium in size; dark and light red in stripes. Flesh yellowish white; firm, crisp, very mild, subacid, aromatic flavor. Tree upright, vigorous and an abundant bearer. December to May.
Jennett (Rawles)-Medium to large when grown on good soil and not allowed to overbear; flat, conical, striped red, sub-acid; very good for market and family use. Good cider apple. October to April.

Mammoth Black Twig-A seedling of Winesap, which it resembles in every way except that the tree is a better and much more vigorous grower, more hardy, and the fruit is much larger. Color dark red; flesh firm; flavor mild. A good keeper. One of the best. December to May.
Missouri Pippin-Large, oblong,; color bright red, with numerous gray dots; very handsome and of fair quality; an early and abundant bearer; profitable market fruit. October to May.

Northwestern Greening-A Wisconsin seedling of great promise, having taken first prize at their state societies. Tree a good grower and hardy. Fruit yellow, smooth, rich, of good size, resembling Grimes Golden in shape and color. Good quality. November to December.

Rome Beauty-Large, roundish flat; bright red, mild, sub-acid, very good. A good grower and early bearer. November to March.

Spitzenburg (Esopus) - Large, round, brilliant red, with gray dots. Flesh firm, rich, crisp, juicy, delicious. A fine apple where it succeeds. October.

Stayman's Winesap-Tree is a vigorous grower, drooping in habit and adapts itself to soils and situations; fruit large size, bright red color and produced in large quantities. A profitable market variety.
Winesap-Medium, conical, dark red; very smooth. Acid to sub-acid, juicy and rich, very valuable for both family and market. Tree very hardy and an early and constant bearer. December to April.
$\checkmark$ Yellow Belleflower-Large to very large, oblong, pale yellow, sometimes blushed; acid to sub-acid, rich and good. Tree a fine spreading grower and hardy. October to January.

York Imperial-Medium to large, oblate; color white, shaded with crimson; flesh firm, crisp, juicy and sub-acid; a good bearer and keeper; one of the best winter apples. November to April.

## Dwarf Apples

For several years the demand has been increasing for Dwarf Apples. These are especially adapted for small places; can be planted 6 to 8 feet apart and trained as espalliers or grown in a bush form. We quote the following varieties: Yellow Transparent, Duchess of Oldenburg, Northwestern Greening, Baldwin and Maiden Blush.

2 -year trees, 60 cts. each, $\$ 5.00$ per 10.
(For description of fruit, see Standard Apples).

## Crab Apples

Profitable for market, coming into bearing quite early. Some of the varieties are not only good for culinary purposes, but are especially desirable for table use.

Price, first class, 5 to 6 feet, 11-16 inch and up, 40 cts. each, $\$ 3.50$ per $10, \$ 30.00$ per 100 .

Florence-Originated in Minnesota. Fruit medium in size, color carmine when well colored; flesh yellowish, fine, acid. Excellent for cooking and for jelly. Valuable for early market. Tree hardy and spreading; bears when young, and inclined to overbear.

General Grant-Tree a vigorous and upright grower; fruit large. Color red to very dark red; flesh white, tender, mild, sub-acid. One of the best. October.

Hyslop - Large size, beautiful dark crimson. Hangs in clusters. Good. September.

Large Red Siberian-About an inch in diameter, grows in clusters. Yellow, lively scarlet cheek. Bears young and abundantly. September.
$\checkmark$ Martha-Raised from the seed of the Duchess of Oldenburg. A rapid grower and a heavy bearer of the most beautiful fruit. Color a bright glossy yellow, shaded with light, bright red. Mild, clear, tart, surpassing all other Crabs for culinary purposes, and fair to eat from the hand. October to November.

## Weber Trees

## Have a Reputation That Is Hard to Beat

169 trees 35 years old produced $71 / 2$ barrels of Apples per tree in 1913.
One of our customers in Calhoun County, Illinois, writes us as follows:

There are 169 trees living out of the lot bought from your firm in 1878 by my father; some were killed by mice and rabbits, others died from overproduction. The following is my record for the past three years-on saleable fruit:
1911.... 169 trees produced 1086 barrels 1912.... 169 trees produced 1047 barrels
1913.... 169 trees produced 1264 barrels

The above does not include drops, cider and evaporator fruit sold.

This party is planting over 1500 Weber quality trees, spring 1914.

## Do you wonder why?

Carman Peaches

Collection No. 7-C.-One each of the above varieties in 1 -year-old, 5 to 6 feet trees for $\$ \mathbf{1 . 5 0}$. Collection No. 8-C.-One each of the above varieties in 1 -year-old, 4 to 5 feet trees for $\mathbf{\$ 1 . 2 0}$. Collection No. 9-C.-One each of the above varieties in 1-year-old, 3 to 4 feet trees for 90 cents.

Collection No. 10-C.-One each of the above varieties in 1-year-old, 5 to 6 feet trees for $\$ 1.50$.
Collection No. 11-C.-One each of the above varieties in 1-year-old, 4 to 5 feet trees for $\$ 1.20$.
Collection No. 12-C.-One each of the above varieties in 1-year-old, 3 to 4 feet trees for 90 cents.

## Peach

The Peach is probably the finest of our fruits, everybody delights in the flavor of a fine, juicy Peach. In this section, select high, dry lands, northern or western exposure preferred.

In order to preserve the continued healthy growth of the trees and the fine quality of the fruit, the trees should have careful and severe pruning at least every two years, so as to preserve a round, vigorous head, with plenty of young wood. The land should not be seeded to grass, but kept in constant cultivation. Fertilize with occasional crops of Cow Peas, Rye or other legume, plowing the crop in while in green state. Wood ashes are a fine fertilizer where it can be obtained. To keep out the borers wash the trunks annually with "Sulfocide" after first removing the earth from around the trunk, during the month of May; let the Sulfocide dry in for several days and then bank up the earth for about six inches above the level of the land; this should be removed during the month of August. For Scale Insects, use "Scalecide" in the fall after leaves have fallen or Lime-Sulphur in the Spring.

The following described varieties have been selected after fruiting a great many varieties in our own orchards. They furnish a succession for over three months, commencing the early part of July.

Plant 20 feet apart, it takes 109 trees to plant an acre.
Prices, unless otherwise noted:

## First Ripening

Alexander-About medium in size; greenish white, nearly covered with deep red. Very juicy, and of good quality. Adheres to the stone.
Arp Beauty-Color fiesh yellow, mottled bright crimson. Excellent flavor, juicy. Tree good grower and productive.
Mayflower-Originated in North Carolina; very early; color perfectly red; a valuable market sort. Perfectly hardy in bud, and a heavy cropper.

Sneed-The earliest peach known; originated in the South, where it has fruited for several years, and, so far, has not failed to ripen eight to ten days before Alexander; and, on account of its earliness, has proven very profitable. Fruit medium size, creamy white, with light blush cheek; excellent quality, resembling its parent, Chinese Cling. Productive.

Triumph-Early yellow flesh peach; ripens with Alexander, blooms late; sure and abundant bearer; strong, vigorous grower. Fruit good size, yellow, with red and crimson cheek.

Wheeler (New)-A new variety from the South. We have fruited this variety here this year and are well pleased with it; we recommend it very highly. Fruit good size, ripens very early; flesh white, juicy; tough skin making it a good shipper. Nearly covered with deep red. You should try this sort. Price, 5 to 6 feet, 50 cts., 4 to 5 ft ., 40 cts., 3 to 4 ft ., 30 cts. each.

## Second Ripening

Carman-Large, resembles Elberta in shape; color creamy white, with deep blush; skin very tough; flesh tender, fine flavor and quite juicy. One of the hardiest in bud. In shipping qualities and freedom from rot it is unsurpassed. Profitable market variety.

Greensboro-The largest and most beautifully colored of the extra early peaches. A freestone; flesh white, juicy and excellent.
$\checkmark$ Hiley-Large, white with red cheek on sunny side. A fine shipper. Hardy in bud; a profitable sort.

## Third Ripening

Belle of Georgia-Very large; skin white, with red cheek; flesh white, firm and excellent flavor; the fruit is uniformly large and showy; a very prolific bearer.

Champion-Originated at Nokomis, Ill. Flavor delicious, sweet, rich, juicy, surpassing all other early varieties. Skin creamy white with red cheek. Early productive and large. Perfect freestone.
$\checkmark$ Crawford Early-This very beautiful and best of yellow peaches is highly esteemed for market purposes. Fruit very large, oblong, shiny yellow, with fine red cheek; flesh yellow, juicy and excellent. Tree very vigorous and productive.

Family Favorite-Very large, and a seedling of Chinese Cling, but a freestone, earlier and of finer color and quality; exceedingly vigorous and productive.

Mamie Ross (Cling)-Very large, oblong; color similar to Chinese Cling, but has more of a red cheek. With us it is one of the best early clingstones.
$\checkmark$ Mountain Rose-Large, white, washed with carmine; flesh tinged pink, juicy, vinous, sub-acid and good flavor. Very good.

Yellow St. John-Nearly the size of Early Crawford and equal to it in beauty. More productive and of better quality. Orange yellow with a deep red cheek.

## Fourth Ripening

$\checkmark$ Captain Ede-Large to very large; a rich orange yellow; flesh yellow, small stone; melting, rich, highly flavored. Free-stone.

Carpenter Cling-Very large, white, rich, juicy. Very good.

Chinese Cling-Fruit very large, oblong; skin clear straw color, almost transparent with delicately mottled red cheek. Flesh exceedingly juicy, sweet and refreshing. Well known, and very popular.
$\checkmark$ Elberta-Supposed to be a seedling of Chinese Cling, but is entirely free. Very large, yellow, with red cheek; flesh yellow, firm, juicy, and of high quality; exceedingly prolific; sure bearer and hardy.
$\checkmark$ Fitzgerald-Fruit large; brilliant color, bright yellow, suffused with red; flesh deep yellow; good quality. Early September.

Old Mixon Cling-Fruit large, skin yellowish White, with red cheek; flesh pale white, very melting, juicy and rich; highly flavored.
$\sqrt{\text { Thurber-Large to very large, skin white, light }}$ crimson mottling; flesh very juicy, vinous, of delicate aroma and of exceedingly fine texture.

Old Mixon Free-Fruit large, skin pale yellow, marbled with red, with deep red cheek. Flesh white, but quite red at the stone; tender, with an excellent, rich, sugary and vinous flavor.

## Fifth Ripening

Banner-Tree a good grower, exceedingly hardy in both wood and buds; bears young, is very productive. Fruit large, deep yellow with crimson cheek; flesh yellow, excellent quality, rich, firm; equal to any as a keeper and shipper. A profitable late market variety. The first crops on young trees are small sized fruit. Last of September.

Crawford Late-Ripens from 14 to 20 days later than the Crawford Early, and is larger in size; color about the same, only a little darker red and yellow. One of the best and finest yellow free-stone peaches; moderately productive. Ripens here in August.

Emma-A new sort from the South, said to be of special value. Ripens later than Elberta and comes to us highly recommended as worthy of trial.

Gold Dust Cling-A large fine peach in every respect; color bright yellow shaded with red; juicy, sweet; valuable for canning.

Lemon Cling-Large, pale yellow, dark red cheek.
Oriole Cling (New)-Large, round, yellow, sweet, juicy, delicious. Ripe in September. Price, 5 to 6 ft., 50 cts. each; 4 to 5 ft ., 40 cts . each; 3 to 4 ft ., 30 cts. each.

Picquet Late Free-Very large, yellow with red cheek; flesh yellow, rich, sweet and of highest flavor.

A most valuable acquisition. The most profitable and desirable of all late yellow peaches.

Rogers Cling (New)-Large, pointed; red cheek; very fine. We believe this will be one of our best late clings; have fruited it here this year. 5 to 6 feet, 50 cts . $; 4$ to $5 \mathrm{ft} ., 40 \mathrm{cts}$. 3 to $4 \mathrm{ft} ., 30 \mathrm{cts}$. each.
Stump the World-Very large, roundish; skin white, with bright red cheek; flesh white, juicy. One of the best late free-stones.

Smock Free-Large, yellow and red; bright yellow flesh. Valuable for market. Last September.

## Sixth Ripening

Dulce-Free, large size, rich orange color with dark red cheek; flesh of fine quality, firm, buttery; a splendid shipper. Small seed.

Krummel's Late-Found in an orchard on property of Mr. Krummel of St. Louis. Color a rich golden yellow, with bright red cheek; round, freestone; juicy. Ripens here about October 5th, and is a good keeper.

Laura Cling-Identical with Krummel's Late, only that it is a clingstone.
Marshall - Large, yellow, immensely productive. October.

Salway - Large, creamy yellow, with crimson cheek; flesh deep yellow, juicy, rich, sweet.

White Heath Cling-One of the finest canning peaches; good size, lemon shape; tree a good grower and an excellent bearer.

Collection No. $\mathbf{1 7 - C}$.-One each of the above varieties, in 1 -year-old, 3 to 4 ft . trees, for $\$ \mathbf{\$ . 8 0}$.

## Pears

The cultivation of this noble fruit is extending as its value is appreciated. The Pear, like most things highly desirable and valuable, cannot be had without attention, labor and skill. One of the most important points in the management of the pear is to gather them in the proper time. Summer pears should be gathered at least ten days before they are ripe; and August pears at least a fortnight. Winter varieties if they will hang so long, may be left until there is danger of frost; gather when on, gently lifting the fruit the stem will readily separate from the limbs.

Place in a dark room until fully matured. The Pear succeeds on most soils, but probably does better on rather sandy loam.

Dwarf Pears must always be planted deep enough to cover the junction of pear and quince three or four inches, and about one-half of the previous summer's growth cut off each spring. The side branches should not be removed higher than one foot from the ground in Dwarfs, while Standard Pears may be trimmed to the height desired.
(The letters " $D$ " and " $S$ " appended to the descriptions of varieties indicate favorable growth either as Dwarfs or Standards, or both).

Plant Standard varieties 20 to 25 feet apart; Dwarfs 10 to 12 feet apart.
Prices unless otherwise noted:

Write us for prices on larger quantities.

## Early Varieties

Bartlett (S-D)-One of the most popular pears; large, buttery and melting, with rich flavor. Tree a vigorous and erect grower; bears young and abundantly. Standard, 5 to 6 ft ., $3 / 4$ inch up, 60 cts . each, $\$ 5.00$ per $10, \$ 45.00$ per 100 . Standard, 4 to 5 feet, $5 / 8$ to $3 / 4$ inch, 50 cts . each, $\$ 4.00$ per $10, \$ 35.00$ per 100. Dwarf, 4 to 5 feet, $3 / 4$ inch and up, 50 cts. each, $\$ 4.00$ per 10.

Clapp's Favorite (D-S)-Very large, resembling Bartlett in shape; ripening a few days earlier. Pale yellow, with brown dots. Juicy, delicate flavor.
$\checkmark$ Koonce (S)-Very early; tree vigorous, upright grower; free from blight; magnificent foliage. Fruit medium to large; skin yellow.
Tyson (S)—Rather above medium in size, melting and juicy, sweet and fine flavored; one of the finest summer varieties. Tree vigorous and upright in growth.

Vermont Beauty (S)—Tree a strong, vigorous grower; productive. Fruit medium size, roundish; skin yellow, nearly covered with carmine; flesh melting, sprightly, best quality; fine flavor and juicy.

## Autumn Varieties

Bartlett-Seckel or Columbia (S)-Good size, hardy, vigorous and productive; of highest quality, rich and well flavored; highly colored.

Beurre d'Anjou (S-D)-A large, fine pear, buttery and melting, with sprightly vinous flavor. Tree a vigorous grower and good bearer. Best on quince.

Beurre d'Clairgeau (S)-Very large, yellow and red. Flesh yellowish. Keeps solid a long time after gathering. Free grower and abundant bearer.

Duchess d'Angouleme (D) - The largest of our good pears; succeeds on pear, but attains its highest perfection on quince, and is a beautiful and vigorous tree. Most profitable for market.

Flemish Beauty (S)-A large, beautiful, melting sweet pear. Tree vigorous and succeeds well in most parts of the country.
$\checkmark$ Garber (S)-One of the Japan hybrids; the best and handsomest of its class. Earlier than Kieffer, larger and much better quality; free from blight; very hardy. Immensely productive, bears young; excellent for canning or preserving.
$\checkmark$ Howell (S-D)-One of the finest American pears. Large, handsome, sweet and melting; tree very vigorous, hardy and productive.

Kieffer Hybrid (S)-This is a seedling raised from the Chinese Sand Pear crossed with the Bartlett. Skin rather rough. Color yellow with red cheek in the sun. Flesh white, juicy, buttery and rich. Tree a very strong, upright grower. Very profitable for market.
$\checkmark$ Louise Bonne De Jersey (D)-A large, beautiful, first rate pear. Yellow with a dark red cheek; melting; buttery and rich. Tree a vigorous grower and most abundant bearer.
Seckel (S)-The standard of excellence in pears. Small but of highest flavor. Tree a strong, slow, erect grower; very hardy and bears abundantly.

Sheldon (S)-Fruit medium; color greenish yellow, mostly covered with russet and a little brownish crimson in the sun. Juicy, rich, aromatic and sweet.

Worden-Seckel (S)-Seedling of the Seckel, which it much resembles in flavor; is equally as luscious, more juicy, and fully as rich and inviting. Is far superior in appearance, size, form and color. Color bright red on one side and yellow on the other. Hardy; bears young; prolific; good keeper.

Standard, 5 to 6 feet, $3 / 4$ inch and up, 60 cts. each, $\$ 5.00$ per 10. Standard, 4 to 5 feet, $5 / 8$ to $3 / 4$ inch, 50 cts. each, $\$ 4.00$ per 10.

## Winter Varieties

Lawrence (S)-Size medium to large; obovate; color a golden yellow; flesh melting, with a rich aromatic flavor. Tree a moderate grower and an abundant bearer.

## Collection Offers

LOOK THEM OVER CAREFULLY, YOU SHOULD FIND ONE OR MORE COLLEC. TIONS THAT YOU CAN USE TO ADVANTAGE.

## Cherry

The Cherry is one of the finest and most delicate dessert fruits. The acid varieties are also highly esteemed for preserving and cooking purposes. Although a very perishable fruit, the period of its use may be prolonged to six weeks by a proper selection of varieties. The trees thrive well in any soil which is sufficiently well drained, but will not succeed a long time where the sub-soil is wet.

Our Cherry trees are all budded on Mahaleb stock, which makes a healthy tree, and does not sprout from the roots, which is a nuisance when common Morello stocks are used.

Plant 18 feet each way; 135 trees to the acre.

## Price except where noted:

Baldwin-Very large, round; dark in color, almost transparent; large, medium length stem. Flesh sub-acid and very good; fruits early, is hardy and very productive.

Bing (Sweet)-Very large, dark brown-almost black; flesh firm, sweet, rich and delicious. A noted western sort. Late. 2 -year, 5 to 6 ft ., at 60 cts. each, 3 trees for $\$ 1.50$.

Black Heart (Sweet)-Very large, black, juicy, rich, excellent and moderately productive.

Black Tartarian (Sweet)-Very large, black, juicy, rich, excellent; productive.

Dikeman (Sweet)-From Northern Michigan. The original tree has attained a large size and is still producing large crops. Fruit large, firm, of excellent quality; fine shipper; the largest of all sweet cher, ries. 2 -year, 5 to 6 feet, at 60 cts each; 3 for $\$ 1.50$.

Dyehouse-A very early and sure bearer. Ripens a week before the Early Richmond.

Early Richmond-Medium size, light red; melting, juicy, sprightly acid flavor. Tree healthy and productive. One of the most popular early cherries.

Elton (Sweet)-Large, rather pointed, heartshaped; pale yellow, with red cheek; sweet and very good.

English Morello-Fair size, very dark red; rich, acid, juicy, good.

Governor Wood (Sweet)-Large, roundish, heartshaped; light yellow shaded bright red; very good. Tree vigorous and productive.

Late Duke-Fruit similar to May Duke, but later and not so sweet.

Montmorency Large - Large, round, slightly heart-shaped; dark red, becoming nearly black when fully ripe.
Montmorency Ordinaire-Large red cherry, ripening ten to fourteen days after Early Richmond. Tree a slow but stiff grower; very prolific bearer; valuable late sour cherry.
$\checkmark$ Napoleon (Sweet)-Of fine appearance and the largest size; yellow and amber, with bright red blush; flesh firm, juicy, delicious. July.
$\checkmark$ Ostheimer (Weichsel)-Large, heart-shaped, almost black when ripe; full of purple juice; exceedingly rich, less acid than the English Morello; good dessert and unsurpassed for kitchen uses. Very hardy both in tree and fruit bud; blooms late, and even young trees bend under their weight of fruit with unfailing regularity.

Lambert (Sweet)-One of the largest cherries; heart-shaped, dark purplish red, turning to almost jet black when fully ripe. Flesh firm, solid, rich and juicy, with sprightly flavor. Tree a strong grower, hardy, heavy bearer. Late. 2 -year, 5 to 6 feet, at 60 cts. each; 3 for $\$ 1.50$.

Reine Hortense (Sweet)-Very large, fine, heartshaped; yellow with red cheek, juicy and delicious. Tree a healthy and handsome grower; productive and very desirable variety.
$\checkmark$ Windsor (Sweet)-Large, dark red; late.
Wragg. Very hardy, vigorous and productive; medium dark purple; fine quality.

May Duke - Medium, dark red, melting, rich, juicy, excellent. A reliable early cherry, nearly sweet.

Yellow Spanish (Sweet)-Large, pale yellow, firm, juicy and excellent. One of the best light colored cherries. Tree productive and a fine grower.

Menfro, Mo., Dec. 8, 1913.
H. J. Weber \& Sons Nursery Co.,

Nursery, Mo.
Gentlemen:-The trees I ordered of you came in fine condition and I wish to thank you for your kind treatment. Enclosed find money order for the amount due you. Again thanking you, I am. Yours truly. C. B. S.

St. Louis, Mo., April 23, 1912.
Messrs H. J. Weber \& Sons,
Nursery, Mo. promptly gave me good satisfaction, etc.

Yours truly, Geo. B. B.
Livingston, Ill., April 25, 1913.
H. J. Weber \& Sons,

Nursery, Mo.
Gentlemen:-I would like to know if it is too late to set out grape vines, if not send me 40 by express, C. O. D. I received the other trees and vines in good condition an everything was satisfactory,

August $P$.
H. J. Weber \& Sons Nursery Co.,
H. J. Weber \& Sons Nursery Co.,

Nursery, Mo.
Gentlemen:-The hedging you shipped me is simply fine, and I am now in the market for some fruit trees, as per itemized list. Now I want you to pick out these varieties yourself, and give me the best growing fruit trees you have. Hoping you will get these trees out just as soon as possible, $I$ beg to remain. Yours very truly, F. L. H.

Everything that we have had from you for the last few seasons has been more than satisfactory, and has given us great pleasure.

## Messrs Weber \& Sons.

Dear Sirs:-The plants came in splendid shape and better in size than I was expecting-far better roots to the Phlox than I had last fall from Ohio, and a most satisfactory largeness to the "Betsies" and Mountain Pinks. Thanks.

## Plums

The Plum tree will accommodate itself to most situations not absolutely wet, but produces its finest fruit and most certain crops on heavy, clayey soil.

The great enemy of this, as well as other smooth-skinned fruits, is the curculio, and as a knowledge of a practical remedy for this pest is essential to the raising of good crops, a description of the only method for its destruction yet known is here given.

Shortly after the blossoms fall, and as soon as the presence of the insect is ascertained by his crescentshaped mark upon the young fruit, procure a sheet large enough to spread over the whole surface of the ground covered by the branches of the trees; slit it in the middle part way through to allow it to pass on each side of the trunk; then jar the tree thoroughly either by striking with a heavy mallet upon the stump of a limb, or by shaking suddenly all the larger branches. The insects, which closely resemble pea bugs, or dried buds, will fall upon the sheet and remain dormant for some minutes; gather them up with the thumb and finger and destroy them. This operation repeated every morning for two or three weeks will save the crop. All stung fruit must also be carefully destroyed to prevent increase of the insects, and thus render the work of the season comparatively easy. This remedy is sure and far more feasible than is sometimes supposed.

Plant 18 feet apart; 135 trees to the acre.

## Price, unless otherwise noted:

Write for prices on larger quantities.

## Foreign Varieties

Bradshaw-Large, dark red, flesh green, juicy, productive, fine for market.
Coe's Golden Drop-Large and handsome; light yellow, firm, rich, sweet; one of the best late plums. Middle of August.
Damson (Common Blue)-A valuable market sort. It bears enormous crops. Thousands of bushels are annually sold in our markets. It is the best plum for preserving. August and September.

German Prune-A large, oval variety; much esteemed for drying; color dark purple; a very agreeable flavor.

Geuii-Large bluish purple; flesh yellowish green, rather coarse; sweet, pleasant. One of the best market varieties. September.

Imperial Gage-Fruit large, oval, skin pale green, flesh juicy, sweet, rich and excellent. Tree very vigorous and productive.
$\checkmark$ Lombard-Medium, round, oval, violet-red; juicy, pleasant and good; adheres to the stone. Tree vigorous and productive. A valuable market variety; one of the most hardy and popular. July.
$\checkmark$ Shropshire Damson-An English variety of great merit for preserving. Tree very vigorous, hardy and an abundant bearer.

## Chickasaw Varieties

Wild Goose-Well known, large, deep red when ripe. Good quality; one of the best native plums; should be in every orchard. July.
$\checkmark$ Newman-Fruit medium, oblong; color bright vermilion. Adheres to the stone. Tree vigorous, foliage smaller than the Wild Goose. In fertility it is truly astonishing; its fruit ripens about August 15 th and lasts until September 15 th.
$\checkmark$ Pottawatamie - Quality excellent; an immense early annual bearer; fruit medium size; tree perfectly hardy; a strong, vigorous grower.

## Japan or Oriental Varieties

This class of Plums and their hybrids are stronggrowing trees with light green foliage and attractive
bloom, productive and usually commence bearing the third to fourth year after planting. They bloom very early, should be planted on north or west slopes and in sections not subject to late spring frosts.

Botan-Beautiful lemon-yellow ground, nearly overspread with bright cherry. Large to very large; oblong, tapering to a point like the Wild Goose; flesh orange yellow, melting, rich and aromatic. August.
$\checkmark$ Burbank-Large, nearly globular; clear cherry red, with a thin lilac bloom; flesh a deep yellow, very sweet and agreeable flavor. Hardy; one of the best for both garden and market planting. August.

Climax-(Hybrid). Vigorous, upright grower. Productive as Burbank, several times larger, two weeks earlier and higher colored. Color deep dark red; skin firm, flesh yellow, sweet, rich, fruity, of fine quality. 5 to 6 ft ., each 60 cts.; 3 for $\$ 1.50$.

Maynard-(Hybrid). Introduced by Luther Burbank. Said to be the nearest perfect Japan plum. Strong, sturdy grower, with heavy foliage; fruit large, nearly round. Color deep dull red with white bloom. Flesh firm, melting, juicy, rich and sweet. First class, 5 to 6 ft., each 60 cts.; per10, $\$ 5.00$.
$\checkmark$ October Purple-Strong, vigorous grower, said to be one of the hardiest of the Japan varieties. Large, round, late purple, productive and of good quality. Fine for late market. 5 to 6 ft ., each 50 cts ; per 10 , $\$ 4.00$.
$\checkmark$ Shiro-(Hybrid). Strong grower, wood hardy, ripening early. Fruit is produced in profusion, medium to large, clear light yellow with thin white bloom, almost transparent. Flesh firm, juicy, rich, pleasant sub-acid. Ripens two weeks before Burbank. 5 to 6 ft., each 60 cts.; 3 for $\$ 1.50$.
$\checkmark$ Sultan-(Hybrid). Also known as Occident. A rapid, compact grower, very productive; fruit falls like apples soon as ripe. Fruit large, spherical; dull red with blue bloom; delicious sub-acid, one of the best for cooking; fine keeper and shipper. Ripens about one week before Burbank. 5 to 6 ft ., each 60 cts.; 3 for $\$ 1.50$.

Wickson-A sturdy, upright grower, productive, almost to a fault; fruit remarkably handsome, deep maroon; stone small; flesh fine texture, firm, sugary and delicious. Excellent keeper and fine shipper.

## Quince

\begin{abstract}
The Quince is hardy and prolific, bearing its crops with great regularity. The fruit always commands a good market, and with most families is considered indispensable for canning and for jelly.

The trees or bushes should have a good, rich soil, clean cultivation and an annual dressing of well rotted manure. Thinning out the twigs so as to keep the head open to the sun and air, and removing dead or decaying branches, is all the pruning that is required. Plant 10 feet apart each way; 435 trees to the acre.

## Description of Varieties

Bourgeat-The strongest and most distinct grower of all Quinces, with large foliage and very handsome fruit. Keeps longer than most other sorts. Very promising.

Champion-Originated in Connecticut. The tree is a prolific and constant bearer; fruit averaging larger than the Orange, but not so high colored;
more oval in shape. Quality equally as fine, and a good keeper.
/ Meech-A vigorous grower and immensely productive. The fruit is large, lively orange yellow, of great beauty and delightful fragrance; its cooking qualities are unsurpassed.
Orange-Fruit large, bright yellow color; a good bearer. The standard variety in quince.

## Apricots

There is no fruit more delicious or beautiful than the Apricot, and its ripening between cherries and peaches renders it especially valuable. Its chief enemy is the curculio, which can be kept in check by the method suggested for plums. Plant the same as plums.
First class, 4 to 5 feet. ................................................................................ Each Per 10
Superb-Seedling from Kansas. The best flavored, low, with red cheek; firm, juicy, with a rich flavor; most productive hardy apricot yet produced. Quality is excellent. Medium size; light salmon color.

Moorpark-One of the largest; color orange yel- low; juicy and sweet; exquisite flavor.

## Mulberries (Morus)

New American-Equal to Downing in fruit, but much hardier. Vigorous grower, very productive; the best variety for fruit; ripe from middle June to middle September. 5 to 6 ft ., 75 cts.; 4 to 5 ft ., 60 cts. each.
$\checkmark$ Russian-Very hardy, vigorous grower; valuable for feeding silk worms, also relished by birds. 4 to
$5 \mathrm{ft} ., 35$ cts.; per $10, \$ 3.00 ; 3$ to 4 ft ., 25 cts.; per 10 , $\$ 2.00$.
$\checkmark$ Downing-Very large, black, handsome, sweet, rich and excellent. 5 to $6 \mathrm{ft}$. ., 75 cts.; 4 to 5 ft ., 60 cts .
$\checkmark$ White-The common variety; valued for feeding silk worms. 4 to 5 ft ., 35 cts .; per $10, \$ 3.00$.

German Prune

Lombard

Burbank

Bradshaw

Wickson

Damson

Maynard

Imperial Gage

Collection No. 18-C.-One each of the above varieties in first class, 5 to 6 ft . trees, for $\mathbf{\$ 3 . 3 0}$.
Collection No. 19-C.-One each of the above varieties, in 4 to 5 ft . trees, for $\mathbf{\$ 2 . 9 0}$.

Champion Quince

American Sweet Chestnuts

Japan Walnuts

Downing Gooseberry

White Dutch Currant

Cherry Currant

Houghton Gooseberry

Perfection Currant

Collection No. 20-C.-Three each Downing and Houghton Gooseberry, Perfection Cherry and White Dutch Currants, all 2 year old, and 1 Quince Tree 4 to 5 feet high, all for $\$ 2.30$.

Collection No. 21-C.-Three each Japan Walnut 2 to 3 ft ., Japan Chestnut 2 to 3 ft ., American Sweet Chestnut 4 to 5 ft ., European Filberts 2 to 3 ft ., Pecan Seedlings 18 to 24 inch, Black Walnut 4 to 5 ft., and Butternut, 4 to 5 ft ., for $\$ 7.50$.

## Persimmons (American)

The Persimmon makes a very handsome ornamental tree, and is hardy in this section. The fruit, although pungent when green, becomes sweet and
palatable if allowed to remain on the tree exposed to the early frosts.
Price: 5 to 6 feet.. Each 50c

Per $10 \$ 4.50$

## Nuts

The growing demand for nuts and the immense quantities imported annually is giving quite an impetus to the planting of nut-bearing trees in America. Many farms contain land that would be far better planted to nut trees than in anything else, and would pay better than farm crops, besides annually growing more valuable as timber. In planting ordinary nut trees we would advise planting the smaller size stock-say one or two year seedlings-for best results.

Almond (Hard Shell)-A fine hardy variety, with large, plump kernel; exceedingly ornamental when in bloom.
3 to 4 feet. . . . . . . . ........ Each 50c Per $10 \$ 4.50$
Chestnut (Japan or Giant)-A dwarf grower. Very distinct from other kinds, the leaf being long and narrow, of a dark green color. A fine ornamental tree in any situation. Commences bearing very young; two-year trees in nursery row frequently produce nuts. Nuts are of a good size. The productiveness, early bearing and enormous size render these of great value.

Chestnut (American Sweet)-A valuable native tree, both useful and ornamental; timber is very durable and possesses a fine grain for oil finish. Nuts sweet and of delicate flavor, and a valuable article of commerce. No farm should be without a grove of these where the soil is adapted to their growth.

> 5 to 6 feet..................... Each 75c Per $10 \$ 6.00$
> 4 to 5 feet. . ..................... . Each 50c Per 104.00
$\checkmark$ Chestnut (Sober Paragon)-One of the most successful nut trees for the northern sections of the United States. Rapid growth, early fruiting, and perfectly hardy. Nuts are large, often measuring $11 / 2$ inches across, and from three to four in a burr, as mild and sweet as the native American chestnut. If you are interested in chestnut culture you should plant several trees of this variety. We obtain our trees from the originator, orders should be placed early as we only order enough to supply our customers. 3 to 5 ft . trees at $\$ 2.00$ each; $\$ 18.00$ per dozen; $\$ 110.00$ per 100 .

Filberts (European Varieties)-The Filbert succeeds well in all soils where the common Hazel grows; fine for planting along timber belts, ravines, and can also be used in shrubbery groups in parks and large grounds.
2 to 3 ft., strong bushes.... Each 75c Per $10 \$ 6.00$
Pecans-Hardy Northern grown, budded varieties. Varieties Appomattox, Indiana, Mantura and Stuart. Orders for these varieties should be placed early so that we can place order with the grower; we can only book orders as long as stock lasts.
2 to 3 ft . trees.
. Each \$2.00

Pecan Seedlings-This species of the Hickory may well rank first among our native nuts in value and cultural importance. It is advisable to plant 1 or 2 year seedlings.
$11 / 2$ to $2 \mathrm{ft} . . . . . . . . . . . .$. . . . Each 50 c Per $10 \$ 4.00$

Butternut-(Juglans Cineria) (White Walnut). A lofty, spreading tree, it is one of our finest native nut trees, valued for its tropical appearance, its beautiful wood, as well as for the nuts. Produces large, handsome, elongated nuts with rich, sweet, oily kernel; very nutritious. Tree grows rapidly and yields large crops in a few years. A fine tree to plant in the lawn near the house.
5 to 6 ft .
. Each \$1.00
4 to 5 ft . . Each 75
Walnut (Japan Seiboldi)-From the mountains of Northern Japan. Leaves of immense size; a charming shade of green. Nuts resemble pecans and are produced in abundance, grow in clusters of ten to fifteen. Shell a little thicker than the English Walnut, but not so thick as the Black Walnut. Meat is sweet, flavored somewhat like a butternut, but less oily. Tree vigorous; handsome form; bears young, and very productive. Perfectly hardy in this section. Valuable as a nut and ornamental tree. Should be planted in all sections. Trees on our grounds are bearing good crops of nuts annually.

Valnut (Max Cordiformis)-Differs from the Seiboldi chiefly in the form of the nuts, which are broad, pointed and somewhat flattened. The kernels are large, sweet and easily removed from the shell. 4 to 5 ft.................... . . Each $\$ 0.50$ Per $10 \$ 4.50$ 3 to $4 \mathrm{ft} . . . . . . . . . . . . . . . . . . . .$. . Each .45 Per 104.00

Walnut (American Black)-The large, oily nuts are borne in heavy crops. They are much relished and always bring a fair price in market. The tree grows quite fast; its wood is exceedingly valuable.
5 to $6 \mathrm{ft} . \ldots . . . . . . . . . . .$. Each $\$ 0.50$ Per $10 \$ 4.50$
 1-year seedlings ..........Each . 15 Per 101.00

## Walnut - Juglans Regia

## English Walnuts

$\sqrt{ }$ Pomeroy. An acclimated, rugged variety, perfectly safe to plant throughout the north, wherever the peach tree is grown. Originated near Rochester, N. Y.; the hardiest of all. A fine lofty-growing tree with handsome, spreading head; produces large crops of thin-shelled, delicious nuts which are always in demand at good prices. An exceedingly handsome tree for the lawn. We have arranged with the disseminator to supply us with a limited number of trees for our customers.
2 -yr. trees, well rooted.. Each $\$ 1.50 \quad$ Per $10 \$ 12.50$

## Grapes

There is scarcely a yard so small, either in country or city, that room for one to a dozen or more grape vines cannot be found. They do admirably trained up to the side of any building, or along the garden fence, occupying but little room and furnishing an abundance of the healthiest fruit. Make the soil mellow, and plant the vines somewhat deeper than they stood in the nursery. Plant about eight feet apart, along the fence or building. For vineyard purposes make rows eight feet apart, six feet in rows.

To plant an acre, 6 by 8 feet, requires 908 plants. Write us for prices on larger quantities.

## Black or Blue Sorts

Campbell's Early-The wonderful new seedling of the distinguished horticulturist, George W. Campbell, of Ohio. Vine healthy, hardy, vigorous and a profuse bearer; bunch and berry large and handsome; quality A1; ripens with Moore's Early, but keeps either on the vine or in the house for weeks. A very great acquisition. Each Per 10 Per 100 2-yr. No. 1. . . . . . . . . . . . . . . . $\$ 0.25 ~ \$ 2.00 ~ \$ 15.00$ 1-yr. No. 1. .................... 20 $1.50 \quad 12.00$

Concord-The old stand-by. A large, purplishblack grape; vines remarkably hardy, vigorous and productive. Very popular; best market sort.
 pact, often shouldered; berries medium, slightly oblong. of dark purple color. Early.

King-Originated near Grand Rapids, Mich. Hardy and as strong a grower as Concord; prolific; color same as Concord; berry much larger, bunch more compact; pulp tender and sprightly; ripens between Worden and Concord. Very fine for home use or for local market.
2-yr. vines . . . . . . . . . . . . . Each $\$ 0.50 \quad$ Per $10 \$ 4.50$
Moore's Early-Bunch medium, berry large, round with heavy bloom; vine exceedingly hardy, entirely exempt from mildew or disease. Its earliness makes it desirable for an early market. Two weeks earlier than Concord.

Each Per 10 Per 100 2-yr. No. 1. . . . . . . . . . . . . . . $\$ 0.15 ~ \$ 1.00 ~ \$ 7.00$ 1 -yr. No. 1 . ................... . . $12 \quad .80 \quad 6.00$
Norton's Virginia-A most productive grape, both for garden and vineyard, bearing large crops in all seasons. Skin thin, flesh tender, with a brisk, refreshing flavor. Best for a dark wine and for canning. Late. Each Per 10 Per 100 -yr. No. 1. . . . ............. $\$ 0.20 \quad \$ 1.50$ \$12.00 type, but earlier, and in every way as healthy. Quality good to best. Woodruff-A large, handsome, red grape, supposed to be a seedling of Concord; remarkably showy, very large bunch and a profitable market sort. The vine is a strong grower, with healthy foliage and entirely hardy; ripens early.

## White Sorts

Moore's Diamond-Grape from Concord seed, fertilized with Iona. In vigor of growth, color and texture of foliage and hardiness of vine it partakes of the nature of its parent, Concord, while in quality the fruii is equal to many of the best tender sorts, and ripens two weeks earlier than the Concord.

## Blackberries

Many kinds of Blackberries will succeed, not only on good fruit land, but even on the most sandy, porous soil. They require the same treatment as recommended for raspberries, but in field culture should be planted in rows seven feet apart and three feet distant in the rows; in garden culture plant rows five feet apart and three feet distant in the rows. The pruning should be governed by the growth of the cane and should be severe. Pinch back the canes in summer when three feet high, causing them to throw out laterals.

When planting 7 by 3 feet apart it takes 2,078 plants for an acre.
When planting 5 by 3 feet apart it takes 2,904 plants for an acre.
Write us for prices on larger quantities.
Our Blackberry plants are all grown from root cuttings; they are free from disease.

Ancient Briton-One of the best of the ancient varieties; very vigorous, healthy and hardy, producing large fruit stems, loaded with good-sized berries of fine quality, that carry well and bring highest price in market. For general planting for home or market in all sections subject to severe winters the Ancient Briton is recommended as a firstclass variety.

Per 10 Per 100 Per 1000 No. 1 plants...........$\$ 0.60 \quad \$ 2.50 \quad \$ 20.00$

Blower-Originated in Chautauqua County, New York. Claimed to be the hardiest, most productive and the finest quality of all the blackberries. Large size, jet black, good shipper. We believe this variety has special merit. Per 10 Per 100 Per 1000 No. 1 plants................ $\$ 0.75$ \$3.50 $\$ 25.00$

Early Harvest-This is one of the earliest blackberries in cultivation; a compact dwarf grower; fruit medium size and fine quality; an enormous bearer. Per 10 Per 100 Per 1000 No. 1 plants. . . . . . . . . . . . . $\$ 0.50$ \$2.50 $\$ 16.00$

Eldorado-Very vigorous and hardy, enduring the winters of the far Northwest without injury, and
their yield is enormous. The berries are large, jet black, borne in clusters, and ripen well together; they are very sweet, melting and pleasing to the taste, have no hard core.

Per 10 Per 100 Per 1000 No. 1 plants. . . . . . . . . . .. $\$ 0.75$ \$3.50 $\$ 25.00$
Mersereau-A remarkably strong grower, upright, producing stout, stocky canes. An enormous producer of extra size berries, brilliant black. and retain their color under all conditions; extra quality; sweet, rich and melting; without core. Ripens with Snyder.

## Raspberries

Will do well on any soil that will produce a good corn crop. Land should be thoroughly prepared and well enriched; ground bone is one of the best fertilizers. Keep well cultivated and free from weeds and suckers. As soon as they have done bearing, cut out the old wood to give vigor to the young canes. Spring is the best season to plant. Plant in rows six feet apart, three feet apart in rows, 2,420 plants to the acre. Write us for prices on larger quantities.

## Purple Sorts

Columbian-An improvement on Shaffer's, which it resembles, but the berry is firmer, adheres to the bush much longer and retains its shape better, both on the market and for canning. Bush a stronger grower, attaining a very large size. One of the hardiest and wonderfully prolific. Unexcelled for productiveness, and stands at the head for canning, making jam, etc.

Per 100, \$3.00

## Rhubarb or Pie Plant

This deserves to be ranked among the best early fruits of the garden. It affords the easiest material for pies and tarts, continues long in use and is valuable for canning. Make the bed very rich and deep. Plant in rows four feet apart and the plants three feet distant. Set the roots so that the crowns are about an inch below the surface.

Linnaeus-Large, early, tender and fine; the very best of all.

## Asparagus

For garden culture dig a trench 18 inches wide and 12 inches deep, trenches 4 feet apart; fill in some well rotted manure in bottom of trench; then cover same with top soil about 2 inches. Plant on top of that, 18 inches apart in the row, and only cover the plant about 2 inches with good, fine soil, filling in the balance by degrees as the plant grows up. Give them a top dressing of manure annually, early in spring after loosening the beds on top, by forking them over.

Write us for prices on larger quantities.

Columbian Mammoth White-It produces shoots which are white and remain so as long as fit for use. In addition to the marvelous advantage of its white color, the Columbian Mammoth white Asparagus is even more robust and vigorous in habit, and throws larger shoots and fully as many of them as the Conover's Colossal.

## Gooseberries

This fruit requires the same cultivation as the currant. The surest method to prevent mildew is to plant thickly in the rows and mulch deeply six or more inches with straw, tan bark, coal ashes, etc. Plantations thus treated have borne large crops for twenty years. The mulch retains moisture in the driest weather; the few weeds that push up are easily pulled, and the fruit is large and more evenly ripened. In mulching be sure that the ground is under-drained, or it is worse than useless. Good cultivating is better than half mulching. Put it on thick. In a dry season the extra amount of fruit will double pay for the material used, not to speak of the saving of labor and cleanliness of the fruit. The price is remunerative, and the demand is yearly increasing. The American varieties are not subject to mildew. To prevent mildew, spray the bushes as soon as the leaves appear in the spring, and several times during the summer, with potassium sulphide (liver of sulphur), one ounce to four gallons of water.

Plant in rows five feet apart, and the plants three feet apart in the rows- 2,904 plants to the acre. Write for prices on larger quantities than quoted.

Carman-Of large size and excellent quality; an exceedingly heavy cropper, requires thinning of the berries at times. 2 -yr. No. 1 plants, each, 35 cts.; per 10, $\$ 3.00$.

Crown Bob-Large roundish oval; red, hairy, of first quality. 2 -yr. No. 1 plants, each, 25 cts.; per 10, $\$ 2.00$.

Downing-Size medium to large, oval, greenish white; plants vigorous, upright, very productive; never mildews. 2 -yr. No. 1 plants, each, 15 cts.; per $10, \$ 1.30$; per $100, \$ 12.00$.

Houghton Seedling-A vigorous grower; very productive; not subject to mildew. Flesh tender and very good. Red when ripe. $2-y r$. No. 1 plants, each, 12 cts.; per $10, \$ 1.00$; per $100, \$ 8.00$.

Josselyn (Red Jacket)-Large berry, smooth; very prolific and hardy; quality and foliage is the best. Each, 20 cts.; per 10, $\$ 1.50$; per $100, \$ 12.00$.

Keepsake (English)-Fruit large; straw colored; of excellent flavor; carries well to market; bloom well protected by early foliage; one of the surest croppers. 2 -yr. No. 1 plants, each, 25 cts.; per 10, $\$ 2.00$.
$\checkmark$ Portage-Considered one of the best Gooseberries in Ohio, where it originated. 2-yr. No. 1 plants, each, 35 cts.; 3 for $\$ 1.00$.

White Smith-Large roundish oval, yellowish white, slightly downy, of first quality. 2 -yr. No. 1 plants, 25 cts. each; per $10, \$ 2.00$.

## Currants

Currants should be planted in good, very fertile soil, with liberal manuring, and the tops should be cut back nearly to the crown, allowing only three or four canes to grow the first year. Prune more or less every year to get rid of the old wood and keep the bushes open. Currant worms can be destroyed by white hellebore, one ounce to three gallons of water, and applied with a sprinkling can. Be sure to use the remedy as soon as, or before, the worms appear. Plant the same as Gooseberries. Write for prices on larger quantities than quoted.

Black Champion-Very productive, large bunch and berry; excellent quality; strong grower. The leading, well tested black sort.
2-yr. No. 1. ................... $\begin{aligned} & \text { Each } \\ & 0.12\end{aligned}$ Per 10 Per 100

London Market-Largely planted in Michigan and regarded there as one of the best market varieties. Plant is extremely vigorous, with perfect foliage, which it retains through the season; an enormous cropper; ripens with Victoria; is large in bunch and berry.
2-yr. No. 1. . . . . . . . . . . . .... $\begin{aligned} & \text { Each } \\ & \$ 0.12 \text { Per } 10 \\ & \$ 1.00 \text { Per } 100 \\ & \$ 6.00\end{aligned}$
Perfection-The color is a beautiful bright red. Size as large or larger than the Fay, the clusters averaging longer. The Perfection has a long stem from the point of attachment to the bush to the first berry, making it easy to pick without crushing any of the berries. It is a great bearer, and on account of its great productiveness the plants should be kept well cultivated and fertilized, as should all heavy
bearers. The Perfection ripens about the same time as the Fay. Quality rich, mild, sub-acid; plenty of pulp, with few seeds. Received the "Barry Medal" in July, 1901, the highest award given to any new fruit at the Pan-American Exposition. The Gold Medal was awarded this currant at the Louisiana Purchase Exposition in 1904.

## Strawberries

Strawberries will succeed in any soil that is adapted to ordinary farm or garden crops. Soil should be thoroughly prepared at a good depth, well drained and enriched. Vegetable manure (muck, rotten turf, wood soil, ashes, etc.) is the best. For field culture set in rows four feet apart, 18 inches in rows; for garden 15 inches each-way, leaving pathway every third row. To produce fine, large fruit, keep in hills, pinching runners off as soon as they appear. Ground should always be kept clean and well cultivated. In winter a covering of leaves, straw or some kind of litter will protect the plants. Do not cover them until the ground is frozen, or so deep as to smother the plants, and remove covering before growth starts in spring. Mulching will keep the fruit clean and the soil in good condition through the fruiting season.

The blossoms of those marked with ( P ) are destitute of stamens and are termed pistillate; those marked (S) are staminate sorts or perfect flowering, and unless a row of perfect flowering variety is planted at intervals, not exceeding about a rod, they will produce imperfect fruit and but little of it. but when properly fertilized, as a rule, they produce more fruit than those with perfect flowers. We advise planting two rows of staminate to three rows of pistillate sorts throughout the field.

On receipt of plants, dip roots only in water, bury the roots in moist, shady ground until you are ready to set them out. Never sprinkle the tops of the plants or allow them to remain in the original package after receipt. Neglect or improper treatment is always fatal.

Our plants are grown under contract by a reliable grower in the State of Michigan, where plants are grown to perfection. You can rest assured that our plants will compare favorably with the best on the market. We have discontinued growing strawberry plants here owing to soil conditions.

Plants will be ready for shipment during the latter part of March or early April, according to weather conditions.

We prefer to ship strawberry plants by express or mail and separate from fruit or ornamental tree orders. If to be sent by mail add 10 cents for 25 , and 25 cents per 100 to price quoted.

Strawberry plants come tied in bundles of 25 . Please make your order in multiples of 25 of a kind; we charge extra where bundles must be broken.

For field culture plant rows 4 feet apart, plants 18 inches apart in the rows; requiring 7,260 plants to the acre.

## Extra Early Varieties

Angust Luther-(S)-Prolific, comes early and continues to bear till practically every berry reaches a good size. Fruit uniform in size and shape. Plants are healthy and make good rows. The fruit is of good size, roundish, bright red, firm and very easily picked. It succeeds best on rather light soils.

Michel's Early-(S)-One of the earliest varieties grown. Plant is a robust grower, strong and healthy, although plant is small; one of the best of the early fertilizers, as it blossoms early and late. Fruit is of medium size and good quality.

Beder Wood-(S)-Heavy bearer of good sized roundish fruit, season early, a good staminate variety to fertilize such sorts as Crescent and Warfield. Plants are deep rooted and stand a drouth better than most varieties, hence will do well on light soils.

Charles I.-(S)-A new extra early berry. Ripens nearly a week before Michel's Early; very productive, yielding more quarts of large, fine looking berries than any other early variety. Strong grower and fertilizer. Berries large, regular form and of good color and quality.

## Medium Early

Senator Dunlap-(S)-Of pronounced Warfield type. It is a favorite wherever it has been tried. Begins to ripen soon after the earliest sorts and continues until near the end of the season. Fruit is large, conical in form, color deep rich red, flesh red and has a sprightly, delicious flavor. One of the best commercial sorts and largely planted everywhere.

Warfield-(P)—Plant a vigorous grower, tough and hardy, and very productive. Fruit large, conical, always of regular form and slightly necked. Color dark glossy red; holds its color a long time after being picked; excellent flavor. A great shipping berry.

Haverland- ( P )-Plant large, healthy, vigorous, and ripens fruit evenly and early. Berries are fine, uniform in shape. large, excellent flavor and bright red color; exceedingly productive. One of the best well known sorts.
Crescent Seedling- (P)—Medium size, bright light scarlet; plant very vigorous and hardy. A great cropper.

Norwood-(S)-This is said to be one of the finest varieties of the list. Plant is strong and healthy, large leaves, berry large and of regular shape. Color bright red all the way through, growing darker with age, firm, a good keeper and will ship well.

Clyde-(S)-Strong, healthy grower and heavy root system; very productive; fruit large, firm, conjeal shape. Color light scarlet.

Pride of Michigan-(S)-Berry bright glossy red, large and rather oblong; firm and of good quality. Ripens with Senator Dunlap, productive plant maker and a promising variety.

## Medium Late

Pocomoke-(S)-Said to be nearly perfect from the standpoint of the commercial grower. Heavy bearer of large, firm, bright red berries, foliage healthy and luxuriant. Good plant maker, never misshapen, and holds up well in size. Said to be identical with Parson's Beauty.

Gibson-(S)-Commences to ripen with Dunlap and continues well into the season of the later sorts. Fruit stems are large and strong and the dark green foliage is an ample protection for blossom and fruit. Fruit is large and regular in shape, in color it is a rich red all over. Only a limited stock to offer.
Heritage- (S)-A new berry much advertised and well recommended. The plant is very large, deep rooted and extremely free fruiting. The berry is a dark, shiny crimson to the center. Carries a large, heavy, green calyx. Fruit extremely large.

Glen Mary-(S)-Large, handsome and of fine flavor, vigorous and productive. A well known sort. Uncle Jim-(S)-Plants large and free from rust. Berry large and of regular form. Goes well with Bubach.

Corsican-(S)-Berries large and of uniform shape. Color bright red, firm, and will sell well in any market. Foliage exceedingly vigorous and leathery, resisting fungus and drouth. If you have never grown this variety you should try it this year.

Bubach- (P)-Of large and uniform size, fine form and color, great vigor of plant and productive. Leaves large, dark green, and endure the hottest sun perfectly.

## Very Late

Brandywine-(S)-Good shape, good quality, good size, firm and productive. A fine late berry for canning and for table use. Color very dark, a good market berry and a good shipper.

Gandy-(S)-A well known, large, late variety; berries bright crimson, uniform size and shape; firm; plant healthy and vigorous. Brings highest price in market, ships well.

Sample-(P)-One of the very best berries. Plants strong, large and healthy; fruit dark colored, uniform size and in great profusion and firm enough to ship well.

Aroma-(S)-Fruit very large, roundish, conical, rarely misshapen, glossy red, of excellent quality and produced in abundance. One of the very best late varieties.
Steven's Late Champion-(S)-This variety makes strong, vigorous plants which yield heavy crops of fruit, and plenty of sturdy runners which take root promptly. The berries are large, long, a little flattened, and sometimes slightly creased, but generally smooth. Color is bright red, flesh red, but lighter. It ripens all over, and has a firm surface protected by prominent seeds; keeps well after picking and is good for canning.

## A Valuable New Variety

Helen Davis-(S)-One of the largest strawberries ever produced. A wonderful yielder and every berry smooth and well shaped. A grand early strawberry. The plants are strong and healthy, a good plant maker and produces strong fruit stems, and many of them. The fruit is a sight to see. Introducers description. Plants hardy and strong. Fruit extra fine quality and appearance. Size one of the very largest. Color a beautiful, rich dark red, clear through. Shape, perfect and smooth. Flavor, in a class by itself, a peculiar velvet quality not found in others. One of the most productive varieties grown. Season early and continues to bear all through the season. Every berry grower should try this variety.

## Fall Bearing Strawberries

Of late we have had considerable inquiries for the Fall Bearing strawberries.

Instructions as to planting and treatment after planting.-Set same as other strawberries. Remove fruit stems as they appear up to about August 1st, then let them mature. Blossoms should be removed from all new set strawberries for best results, but more particularly fall bearing varieties. Fertilize your ground and cultivate well. The better the soil and care, the better the fruit and the more fruit will you obtain.

Superb-(Perfect Flower)-One of the very best. Plants are strong and stand the winter well after producing a heavy crop of fruit from about Aug. 15 th to November, according to season. The fruit of Superb is very large, round, rich, dark colored. glossy, attractive and smooth. Each berry is of good shape and ripens all over at once. Superb will please you and bring you nice, fresh strawberries in the late summer and fall.

Iowa-(Perfect Flower)-This extra fine fall bearing variety was introduced by M. Crawford, of Ohio, well known as an authority on strawberries. The berries are large, nearly round, of fine appearance and quality. Flavor is very fine. You should try this variety.

Owing to the drouth last summer there will be no plants to offer grown in this section, hence we have made arrangements with a leading grower in Michigan to supply our customers with such stock as they may require.

Prices of strawberry plants F. O. B. our nurseries for shipment in early spring as soon as weather permits.

All Strawberry orders should be sent separate from tree and shrub orders; plants should be sent by express or mail, according to quantity desired. If by mail add 10 cts. for 25 plants and 25 cts. for 100 plants to the amount of the bill. Express shipments are to be paid for by the purchaser upon receipt.

Prices of Strawberry Plants F. O. B. Bridgman, Mich., purchaser to pay all express charges. All orders to be shipped direct from grower must be accompanied with full remittance with order. We can not make C. O. D. shipments from this point. Purchaser pays all express charges from shipping point to destination.

Where we have to divide in small lots of less than 1000 of a variety there will be an additional charge of 25 cts . per thousand to cover extra expense for dividing and packing these small orders. This only applies on orders for 1000 or less, and where an assortment of varieties is taken.

When ordering, always state whether shipment is desired from Nursery, Mo., or from Bridgman, Mich.

## Landscape Department

Owing to the frequent requests we receive from our patrons for assistance along the above lines, we have arranged with competent Landscape Designers and Foresters to take up any branch of work. Under this arrangement, we are prepared to supply at reasonable rates the following:
(A) LANDSCAPE DESIGNING-Preparing plans for parks, club grounds, cemeteries and private places; location of buildings, gardens, driveways, etc.
(B) FORESTRY-Expert advice on the treatment of diseased trees, shrubs, etc.; the preservation of existing trees; the supervison of plantng; construction of driveways, formal gardens, etc., according to plans.
(C) CONSULTATION-Frequently it is desired to secure competent advice regarding contemplated improvements. This service can be supplied at reasonable expense.
(D) LANDSCAPE PLANS BY MAIL-For medium or small size places, plans can be developed by furnishing photos and rough sketches showing location of present buildings, the position of existing trees that it is desired to preserve, the exact dimensions of the grounds, etc. For large grounds, we advise consultation.

Owing to the varied problems involved, it is impossible to give definite rates. We will, however, gladly furnish same upon receipt of correspondence designating just what is desired.

All correspondence in reference to the above should be addressed to Department "L."
H. J. WEBER AND SONS NURSERY CO.,

Nursery, Missouri.

## Ornamental Department. Breif Suggestions to Planters

What to Plant-Impressed with the importance of planting only the most hardy ornamental trees and shrubs, and in order that our patrons may be spared much disappointment and expense, we have, as far as possible omitted from our catalogue anything that is liable to suffer from severe cold. We have with great pains secured, both at home and abroad, all valuable hardy material, so as to render our assortment of this class as complete as possible. An examination of the catalogue shows what an extensive variety of stock is offered, enabling the planter by a judicious use of the same to accomplish any desired result with perfectly hardy trees, shrubs and plants. For convenience we have grouped the shrubs and plants. For convenience we have grouped the
trees under the following heads: Deciduous Trees, Weeping trees under the following heads: Deciduous Trees, Weeping
Dciduous Trees, Ornamental Shrubs, Vines and Climbers, Dciduous Trees, Ornamental Shrubs, Vines and Climbers, Hedge Plants, Roses (Hybrid Perpetual, Everblooming,
Climbing, Trailing, etc.), Evergreens, Evergreen Shrubs, PerClimbing, Trailing, etc.), Evergreens, Evergreen Shrubs, Per-
ennials, Hardy Bulbs, Tender Bulbs and Greenhouse Plants.

For Parks and Extensive Grounds-No difficulty can be experienced by anyone in making selections for this purpose. But we cannot impress too strongly the importance and value of flowering shrubs for effective masses and groups. There are many who imagine that the Rhododendron and Azalea are indispensable. This is a great error. In this latitude both Rhododendrons and Azaleas require prepared soil and protection, while hardy shrubs like the Weigelia, Deutzia, Spirea, Hardy Hydrangea, Japan Quince, Double-Flowering Almond, Lilac, Snow-Ball, Althea, Paeony, Phlox and Japan Anemone, when planted in masses, produce a magnificent effect, need no protection, and demand little skill or care in their management. What grand masses of bloom can be had throughout the season by proper use of the various families. Then the purple and variegated-leaved trees and ilies. Then the purple and variegated-leaved trees and shrubs may also be planted in such a manner as to afford a rich and striking contrast. Groups of flowering trees form superb objects at the blossoming season, and it is strange that planters do not employ them more.

Highly effective groups can be formed of trees and shrubs possessing bright colored bark in winter.

For Lawns and Small Places-Whatever specimens are planted should be of the finest species, of moderate size, of graceful habit of growth and handsome foliage. A pendulous tree or one with variegated foliage may be occasionally introduced and will add to the beauty of the grounds. Depend mainly upon dwarf shrubs for small places, and in selecting, aim at securing a succession of bloom. Dwarf evergreens are very useful, and in small grounds hardy herbaceous border plants can be used, with the most satisfactory results. A proper selection will afford as much bloom as ordinary bedding plants, and at half the trouble and expense.
When to Plant-Deciduous Trees, Shrubs and Vines can be planted either in Spring or Fall. Spring is the best time for Evergreens generally.

How to Plant-Preparation of the Roots: Cut off smoothly all bruised or broken roots up to the sound wood; this prevents their decaying and hastens the emission of new roots and fibres.

Preparation of the Top-This consists in cutting back the top and side branches in such a way as to correspond with the more or less mutilated roots as follows:

Trees with branching heads should have the small branches cut clean out, and the larger ones, intended for the framewood of the tree, cut back till within two or three buds of their base. In cases where there is an abundant root, and small top or few branches, the pruning need be very light; but where the roots are small and the top heavy, severe pruning will be necessary. These remarks are applicable to all Dciduous Trees and Shrubs. Evergreens seldom require pruning, but Arbor Vitae and other Evergreens planted in hedge rows may be advantageously shorn immediately after planting.

Pruning-As practiced by some people, has the effect to render trees and shrubs unnatural and inelegant. We refer to the custom of shearing trees, particularly Evergreens, into cones, pyramids and other unnatural shapes. Every tree, shrub and plant has a habit of growth peculiar to itself, shrub and plant has a habit of growth peculiar to itself,
and this very peculiarity is one of its beauties. If we prune and this very peculiarity is one of its beauties. If we prune all trees into regular shapes, we destroy their identity. The pruning knife, therefore, should be used to assist nature,
and handled with judgment and care; to top off straggling and handled with judgment and care; to top off straggling
branches, to thin the head of a tree which has become too branches, to thin the head of a tree which has become too
dense, and to remove dead wood. Sometimes it becomes necdense, and to remove dead wood. Sometimes it becomes necgreat size.

Shearing may be practiced on hedges, but never on trees or shrubs.
Pruning Shrubs-Many persons train and shear them into regular shapes, imagining that regular outline adds to their effect and beauty. While symmetry and regularity of form are to be admired in a shrub, this quality should never be gained at the expense of health and natural grace. Each shrub has peculiarities of habit and foliage, and we should aim to preserve them as far as possible. Judicious pruning to secure health and vigor is necessary, but trimming all kinds of shrubs into one form shows a lack of appreciation for natural beauty, to say the least. Weigelias, Deutzias, Forsythia and Mock Orange flower on the wood of the preceding year's growth, hence these shrubs should not be pruned in winter or spring, but in June, after they have finished flowering, when the old wood should be shortened or cut out, thus promoting the growth of the young wood which is to flower the following season.

Spireas, Lilac. Althaeas and Hneysuckles may be trimmed during the winter or early in the spring, but the branches should only be reduced enough to keep them in good shape. The old growth should be occasionally thinned out and the suckers and roots sprouts removed when they appear. The best time, however, for pruning all shrubs is when they have done flowering.

The Hydrangea Paniculata Grandiflora should be severely cut back and thinned early in spring.
Pruning Evergreens-Use the knife occasionally to thicken the growth and preserve the shape. This can be done in April or May, just before the trees start to grow.

Large Specimen Trees are planted with less risk when dug with ball of earth. We make extra charge for this, but with ball of earth. We make extra charge for this, but

Norway Maple-Acer platanoides

American Elms, Evergreens

Chinese Catalpa-Catalpa Bungei

Tulip Tree -Liriodendron tulipifera

Lombardy Poplar Populus fastigiata

Japan Maple-Acer polymorphum

Wier's Cut-leaf Silver Maple -Acer var. Wierii laciniatum

and Shrubs, well arranged

Oriental Sycamore or Plane Tree -Platanus orientalis

Collection No. $\mathbf{2 5}$-C.-One Norway Maple, 6 to 8 ft .; 1 Tulip Tree, 5 to 6 ft .; 1 Wier's Cut-leaved Maple, 6 to 8 ft .; 1 Lombardy Poplar, 6 to 8 ft .; 1 Catalpa Bungei, 1 yr. head, 5 to 6 ft . high; 1 Oriental Sycamore, 6 to 8 ft - six fine ornamental trees for planting on the lawn around any home, for $\$ 3.40$.

For larger sizes, see descriptions under proper headings in this catalogue.

White Flowering Dogwood-Cornus florida

Chinese Soulangeana Magnolia-Magnolia
agnolia

Bechtel's Double Flowering Crab -Pyrus Ioensis var. Bechtels

Purple Leaved Plum-Prunus Pissardi

Double Flowering Cherry-Cerasus avium

Paul's Scarlet Thorn-Crataegus var. Coccinea flore pleno Paulii

Collection No. 26-C.-One White-flowering Dogwood, 3 to 4 ft .; 1 Chinese Magnolia, 3 to 4 ft .; 1 Purpleleaved Plum, 5 to 6 ft .; 1 Double-flowering Cherry, 4 to 5 ft .; 1 Double-flowering Bechtel Crab, 3 to 4 ft ., and 1 Paul's Scarlet Thorn, 3 to 4 ft .-six fine flowering lawn trees for $\mathbf{\$ 5 . 0 0}$.

## Classification of Ornamental Trees

For the convenience of purchasers we have classified the various Ornamental Trees, as follows:

Class I-Trees Suitable for Street and Avenue Planting.
Acer Dasycarpum (Silver Leaved Maple).
Acer Platanoides (Norway Maple).
Acer Saccharinum (Sugar Maple).
Allanthus Glandulosa (Tree of Heaven).
Celtis Occidentalis (Hackberry or Nettie Tree).
Fraxinus Alba (White Ash).
Leriodendron (Tulip Tree).
Platanus Occidentalis (American Sycamore).
Plantanus Orientalis (European Sycamore).
Populus Fastigiata (Lombardy Poplar).
Populus Monolifera (Carolina Poplar).
Populus Nigra (Grecian Poplar).
Quercus alustris (Pin Oak).
Quercus Rubra (Red Oak).
Salisburia (Maiden Hair).
Tilia Americana (American Linden).
Tilia Americana (American Linden)
Tilia Platyphilla (Large Leaved European Linden).
Ulmus Americana (American Elm).
ClassII-Trees with Cut or Lanceolated Foliage:
Acer var. Wierri Laniciniatum (Wier's cut-leaved Maple).
Acer Polymorphum (Japan Maple).
Acer Polymorphum (Japan Maple). (Purple Japan Maple).
Acer Polymorphum Atropurpureum Dissectum (Purple cut-
leaved Japan Maple).
Alnus Glutinosa var. Laciniata Imperialis (Imperial cutleaved Alder).
Betula Alba var. Laciniata Pendula (Cut-leaved Weeping Birch).

Sorbus Quercifolia (Oak-leaved Mountain Ash).
Class III-Trees with Colored Foliage:
Acer Platanoides var. Reitenbachi (Reitenbach's Maple). Purple foliage in fall.
Acer Platanoides var. Schwedlerii (Schwedler's Maple). Purple foliage in spring.
Acer Polymorphum var. Atropurpureum (Japan Maple). Purple foliage.

Acer Polymorphum var. Atropurpureum Dissectum (Japan Maple). Purple foliage.
Betula Alba var. Atropurpurea (Birch). Purple foliage.
Fagus Sylvatica var. Purpurea Major (Beech). Purple foliage.
Fagus Sylvatica var. Purpurea Riversil (Beech). Purple follage.
Prunus Plzzardi (Plum). Purple foliage.
Populus Canadensis var. Aurea Van Geertii (Poplar). Yellow follage.
Populus Alba Bolleana (Poplar). Silver foliage.
Querous Robur Pedunculata var. Concordia (Oak). Yellow foliage.
Salix Regalis (Silver Willow). Silver foliage.
Class IV-Trees Producing Conspicuous Flowers:
Aesculus (Horse Chestnut).
Aralia (Angelica Tree).
Catalpa Kaempferii and Speciosa.
Cercis (Red Bud).
Chionanthus (White Fringe).
Cornus (White and Red Flowering Dogwood).
Crataegus (Thorn). White and scarlet flowering.
Cytisus (Golden Chain).
Halesia (Silver Bell).
Koelreuteria (Varnish Tree).
Leriodendron (Tulip Tree).
Magnolia, in variety.
Persica (Peach). Double flowering.
Prunus Triloba (Plum). Double flowering.
Prunus Padus (Bird Cherry).
Pyrus (Crab in variety).
Class V-Weeping Trees. See Weeping Trees in this Catalog. For descriptions, see under proper heading in this catalogue.
For sizes larger or small than quoted herein, Write us. We frequently have specimen stock of certain varieties and always have younger or smaller stock than we quote. Describe the class of stock desired and we will quote on such as we can supply.

## A PRACTICAL HANDBOOK OF

 Trees, Shrubs, Vines and Herbaceous Perennials
## By JOHN KIRKEGAARD

Formerly Assistant to Director of the Royal Botanical Gardens, Copenhagen, Denmark. Latterly Twenty Years in American Forestry and Botanical Work.

This practical reference book is the logical result of years of practical work in the author's career. He has sought, and successfully, the simplest form of explanation and instruction in the message which he conveys from each plant and growing thing to the amateur or gardener who seeks to be tree-wise, shrub-wise and vine-wise. No book of recent years is so comprehensive and so practical as this volume. Exhaustive descriptions, variations from type and more technical matter must be sought in the Horticultural Encyclopedias, for in these pages the author stands as the interpreter of the plant to the planter. The character of information may be summed up in the sub-title of the book-The Hardy and Ornamental Varieties: Their Characteristics: Uses: and Treatment.
Adequate space is given to articles upon injurious insect pests, the adaptability of plants for certain purposes, planting, pruning, spraying and cultivation. In short, the author has endeavored to include whatever information the householder needs with which to secure the proper selection, care and treatment of such trees and plants as are best adapted to his purpose, then to aid him in properly caring for them.

Illustrations in Sepia. Planting Plans. 410 pages. 8vo. Beautifully bound in cloth. Price $\mathbf{\$ 2 . 5 0}$ net. Mailing price $\$ 2.71$

## Deciduous Trees

In order to make it easier for planters to select trees for particular purposes, we have adopted letters to denote the various classes, as follows:
T-Denotes trees that attain a height of 50 feet and over at maturity
M-Denotes trees that attain a height of 25 to 40 feet at maturity.
S-Denotes trees that attain a height of 8 to 15 feet at maturity.

## ACER - Maple

A. Dasycarpum or Eriocarpum (Silver-leaved) T.-A hardy rapid growing native tree of large size, valuable for producing a quick shade. Excellent for street planting. Our stock of these is very large in all sizes.

Large Specimen trees quoted on application.
A. Dasycarpum var. Pyramidalis. (Pyramidal Silver Maple). T.-Grows in perfect pyramidal shape on the order of the Lombardy Poplar; the best of the pyramidal-growing trees. We recommend it very highly for Avenue planting; also for making screens. Our trees are low branched.

A. Dasycarpum var. Wierii Laciniatum (Wier's Cut-leaved Silver Maple). T.-One of the best cut or dissected-leaved trees, being of rapid growth it soon produces an effect. Young shoots slender and drooping.

| 2 | to | $21 / 2$ | in. dia. | 3.50 | 32.50 | 300.00 |

A. Platanoides Var. Reitenbachi (Reitenbach's Norway Maple) M.-An exellent variety of pyramidal habit; foliage green in early spring, turning purple during mid-summer and to purplish scarlet in the autumn.

A. Platanoides Var. Schwedleri (Purple Norway Maple). M.-The beautiful leaves attract attention at all seasons, but are especially fine in spring, when their gleaming red and purple contrasts brightly with the delicate green of other trees. In mid-summer they are purplish green, in autumn golden vellow.

## JAPANESE MAPLE

A. Polymorphum. S.-This is the normal form or type; growth slow and shrubby; foliage small, five-lobed, and of a bright, cheerful green in spring and summer, changing to a lovely dark crimson in autumn; perfectly hardy when well established. One of the most beautiful and valuable of smallsized trees.
3 to 4 ft . high A. Polymorphum Atropurpureum (Purple-leaved Japan Maple). D.-Forms a bushy shrub; foliage dark purple and deeply cut; very ornamental. The hardiest and altogether the best of the Japan Maples.
2 to 3 ft. specimens. . .................................... . Each $\$ 4.00$
A. Polymorphum Atropurpureum Dissectum (Cut-leaved Purple Japan Maple). D.-One of the most striking and handsome varieties. Form dwarf and weeping. Foliage beautiful rose color when young, changing to deep purple as they become older, deeply lanceolated. Growth slender and they become older, deeply lanceolated. Growth slender
2 to $21 / 2 \mathrm{ft}$.
A. Polymorphum Paimatum (Palm-leaved D-Leaves five to seven lobed (Palm-apen Japan Maple) son in autumn; habit upright, very compact. 2 to 3 ft . high
A. Polymorphum Sanguineum (Blood-leaved Japan Maple). D.-Of dwarf habit and rounded form; foliage five-lobed and serrated; reddish crimson in June. A charming variety and one of the best. 2 to 3 ft . high

## AESCULUS - Chestnut

A. Hippocastanum (Horse). T.-This magnificent, largesized tree has no superior on the lawn. In the spring it is profusely covered with panicles of white flowers dotted with profusely covered with panicles of white fowers Each Per 10
red.
Each

A. Hippocastanum Var. Alba Flore Plena (Double White Flowering Horse Chestnut). T.-A splendid variety, with double white flowers, in large panicles, and of fine pyramidal growth. This variety bears no nuts to litter the lawn and is highly recommended on that account. One of the best is highly recomm
5 to 6 ft ., imported
Each \$1.50
6 to 8 ft ., imported $\qquad$ Each 2.25
A. Hippocastanum Var. Rubicunda (Red-Flowering Horse Chestnut). M.-Flowers showy red. One of the most valuable lawn trees. Forms a round head and leaves are of a deeper green than the white flowering sort.
 $\begin{array}{rrr}6 & \text { to } \\ 8 & \text { to } 10 & \mathrm{ft.} .,\end{array}$

## AILANTHUS - Tree of Heaven

A. Glandulosa. T.-A rapid growing, lofty tree, long, elegant foliage. A distinct ornamental tree with pinnate foligant foliage A distinct ornamental tree with pinnate follage, exempt fropical effects.

## ALNUS - Alder

A. Glutinosa (European or Common Alder). M.-Foliage roundish, wedge-shaped; growth rapid.

## AMALANCHIER - Mespilus

A. Botryapium (Service Tree or Shadblow). M.-A small, slender tree that bears a profusion of drooping spikes of white Howers, rendering the tree quite conspicuous about the time that shad are running up the river. Also grown for its fruit.
$\begin{aligned} & 18 \text { to } 24 \mathrm{in} . \\ & 2 \text { to } 3 \\ & \mathrm{ft}\end{aligned}$

## AMYGDALUS - Almond

See Deciduous Shrubs.

## ARALIA - Angelica Tree

Very ornamental foliage, small tree, adapted to a variety of soils, but thriving best in well-drained situations. The immense finely divided foliage, large, showy heads of white flowers, followed by the showy-colored seed clusters, render them very effective. As lawn plants or for use in sub-tropical effects they will be found very useful.
A. Spinosa (Hercules Club). S.-A very showy sort, yet which produces suckers quite freely. Immense clusters of small, white flowers in July.

Select Specimens $\$ 2.00$ to $\$ 5.00$ each.

## ARALIA PENTAPHYLLA

See Deciduous Shrubs.

## BETULA - Birch

The various varieties of Birches are considered among the most graceful of the deciduous trees, and are almost indispensable in producing decorative effects. The various barks are always attractive.
B. Alba (European White Birch). T.-Of which Coleridge says: "Most beautiful of forest trees, the lady of the woods."

B. Alba Var. Atropurpurea (Purple Birch). M.-A handsome, white-barked tree, with dark purple leaves which contrast beautifully with the bark.
$\begin{array}{ll}4 & \text { to } \\ 5 & \mathrm{f} \\ \text { to } \\ 6 & \mathrm{ft} .\end{array}$
Each Per 10

B. Alba Var. Fastigiata (Pyramidal Birch). M.-Of pyramidal habit, like the Lombardy Poplar. Very usefu

B. Alba Var. Laciniata Pendula (Cut-leaved Birch). T.See Weeping Trees.
B. Lutea (Yellow Birch). M.-This variety makes a shapely, handsome tree, with bronze-colored bark. It will grow almost anywhere and should be included in collections of desirable trees.

B. Papyracea (Paper or Canoe Birch). T.-Native of America, makes a large tree, foliage large and handsome, bark brilliant white.

## BROUSSONETIA - Paper Mulberry

B. Papyrifera (Ornamental). S.-Fast growing, deciduous, Mulberry-like tree. Requires rather good open garden soil. Hardy in situations which are not very exposed. Admirably adapted for city planting, as it is not subject to the action of the gases as other trees.

## CARAGANA - Pea Tree

C. Arborescens. D.-A handsome dwarf tree with bright yellow flowers in May and June.

## CARPINUS - Hornbeam

C. Betulus (European Hornbeam). S.-This will make a good hedge or screen, bears pruning well, leaves remain on long after winter sets in; fine for shelter belts, as it endures rough and windy situations and thrives well in common soils. Foliage similar to the Beech, but thinner.

## CASTANEA - Chestnut

See Nut Trees.

## CATALPA - Indian Bean

C. Bungei (Chinese Catalpa). D.-A small species that grows 8 to 10 feet high, as broad, forming a great bush clothed with a dense mass, heart-shaped leaves. Among our hardy shrubs there are but few, if any, that are more effective as foliage plants for park or lawn. When grafted on a stalk of one of the tree species 5 or 6 feet high it makes a handsome standard tree, with a very dense and symmetrical globular head.
year grafted, 5 to 6 ft stems.... Each Per 10 Per 100 year grafted, 5 to 6 ft . stems........ $\$ 1.20 \quad \$ 10.00 \quad \$ 80.00$ $\begin{array}{lllll}2 \\ 2 & \text { year grafted, } 5 \text { to } 6 \mathrm{ft} \text {. stems, select. } 1.50 & 12.50 & 110.00\end{array}$ Select Specimens, 3 to 4 year old, $\$ 3.00$ to $\$ 5.00$ each.

C. Kaempferii (Japan). M.-Has large, luxuriant foliage and large, handsome white flowers, with purple dots and a. touch of yellow around the throat, with a pleasant, delicate fragrance.
 Select Specimens, $\$ 2.00$ to $\$ 5.00$ each.
C. Speciosa (Western). T.-One of the most rapid growers. Large heart-shaped, downy leaves, and compound panicles of white flowers, tinged with violet and dotted with purple and yellow.
This is one of the most valuable of timber trees, valuable for lumber, tie and fence posts. Every farm should have from one to five acres in timber belt of this valuable tree.

## CELTIS - Hackberry or Nettle Tree

C. Ocidentalis. M.-A native tree that deserves more general planting. Leaves are light green, glossy, pointed. Not subject to insect pests. Branches are slender and grow horizontally, forming a wide-shaped head. Thrives in all soils.

## CERASUS - Cherry

C. Avium Var. Flore Alba Plena (Large Double-Flowering Cherry). M.-The double white flowers, like little roses, cover the tree completely, forming an object of rare beauty.

.Each $\$ 5.00$
C. Florida Flora Rubra (Red Flowering). M.-Redently introduced. A variety producing flowers suffused with bright red; blooms when quite young. One of the finest flowering trees.

C. Florida, Welch's Variegated (Variegated Leaved Cornus Florida). M. -The leaves are beautifully blotched, tinted and bordered creamy white in early spring, changing to carmine center and crimson margin in mid-summer and fall holding its magnificent coloring the entire season. The best hardy variegated leaved tree for our climate. 3
4 to 4 ft .

Each \$3.00
3.00

## CRATAEGUS - Thorn

C. Coccinea (Scarlet-fruited Thorn). M.-A fine native variety. Single white flowers in spring, scarlet fruit in autumn.

C. Crus-Galli (Cockspur Thorn). S.-A well-known native thorn; has long sharp spines or thorns; fruit bright red; valuable for hedging.

Contha $\$ 0.75$ Per $10 \$ 6.50$
C. Oxycantha Var. Flore Alba Plena (Double White Thorn) S.-Has small, double white flowers. A highly ornamental variety, on account of both foliage and flowers. Makes a striking contrast when planted with the double scarlet 4 to 5 ft . ................................Each $\$ 0.75$ Per $10 \$ 6.50$
C. Oxycantha Var. Coccinea Flore Plena Paulii (Paul's Double Scarlet Thorn). S.-Flowers bright carmine red. Superior to any of its color.
to 5 ft. ..............................Each $\$ 0.75$ Per $10 \$ 6.50$

## CYTISUS - Golden Chain

C. Laburnum. M.-A native of Europe, with smooth and shining foliage. The name Golden Chain alludes to the length of the drooping racemes of yellow flowers, which appear in June.

## FAGUS - Beech

F. Ferruginea (American Beech). T.-Our noble native forest tree, with silvery bark, fine spreading growth and symmetrically rounded head. Especially attractive in spring with the tender, delicate green of its leaves and pendant flower. In this section, like many of our hardwooded and flower. In this section, like many of our hardwooded and valuable trees, is rather hard to transplant, require
careful handling and care throughout the first season.

F. Sylvatica Purpurea Riversii (Rivers Blood-leaved Beech). M. -Where a large tree with purple foliage is wanted, noth ing equals this. It is generally conceded to be the finest of all purple-leaved trees.
3 to 4 ft .

## FRAXINUS - Ash

A class of large ornamental trees, adapted to a great variety of soils. Of quite rapid growth and possessing many desirable characters for lawn, street and park planting.
F. Alba (American White). M.-A rapid growing native tree, valuable for planting along streets or in parks; may be extensively planted for timber; largely used in the manufacture of agricultural implements.

F. Excelsior (European). M.-A more rounded head and darker foliage than the $F$. Alba.

## GYMNOCLADUS - Kentucky Coffee Tree

G. Canadensis. M.-A strikingly ornamental, irregular, open-topped tree, with peculiar rough-barked and twigless branches and immense, broad, double-compound foliage of a peculiar bluish-green color. The flowers are white, in open racemes, followed by immense, long, brown pods. A picturesque and desirable tree.
5 to 6 Each Per 10 Per 1000
$\qquad$
HALESIA - Silver Bell
Brown light green foliage, dense growing trees of small size and well adapted for lawn culture and grouping with other plants. Their chaste, pure white flowers are produced in abundance along the entire length of the branches as the leaves appear in spring, and give a very charming picture. Best grown in well-drained soil in somewhat sheltered ture. B
H. Tetraptera. S.-The hardiest species. Very choice.

## JUGLANS - Walnut

See Nut Trees

## KOELREUTERIA - Varnish Tree

K. Paniculata. M.-A charming small tree, a native of China, with glossy, divided foliage and large terminal panicles of showy golden-yellow flowers in July, followed by icles of showy golden-yellow fowers in july, followed curious bladdery seed-vessels. Its pleasingly colored foliage and neat habit of growth, with its showy flowers, render it
a very desirable lawn tree.
Each Per 10 Per 100

## LARIX - Larch

1. Europaeus (European). T.-A beautiful, rapid-growing pyramidal tree, with all the characteristics of an evergreen, except that it drops its foliage in the autumn. 4 to 5 ft . ..............................Each $\$ 0.75$ Per $10 \$ 6.50$

## LIQUIDAMBAR - Sweet Gum

L. Styraciflua. T.-A large native tree, with rough, corky bark, and shining, deep lobed, star-shaped leaves, changing to deep crimson in the autumn.

## LIRIODENDRON - Tulip Tree

L. Tulipefera. T.-One of our very largest native trees, with large, smooth, shining leaves, greenish-yellow flowers and an umbrageous head.

U. Campestre (English). M.-A native of Europe; a noble, rapid-growing tree, forming a dense head; a desirable tree for streets, avenues, etc.

Select specimens quoted upon application.
For Weeping Elm-See Weeping Trees.
H. J. Weber \& Sons Co.

Edgemont Station, Ill., 12, $9,13$.

## Nursery, Mo.

Gentlemen:-I received the American Beauty Rose for which I thank you. We are well pleased with all of our nursery stock from Weber's. Wish we had known Weber's when we bought our first stock which proved unsuccessful. Thaning you again. I am, Yours respectfully, Mrs. E. S.

Lebanon, Ill.. April 11, 1913.
H. J. Weber \& Sons Nursery Co.,

Nursery, Mo.
Gentlemen:-Received the shipment of nursery stock. Everything satisfactory and am sending you another order for more Cherry trees. Please ship right away. Have peach trees in my orchard which I bought from you four years ago, and they are the best trees I have. Will send you a big order for more trees this fall.

Messrs Weber \& Sons,
Nursery, Mo.
Gentlemen:-The trees arrived in good shape a few days ago amid a srrow storm, and had to defer setting them until today but found them well wrapped and kept them so. Many thanks for filling the order so promptly.

Respectfully, Mrs. S. J. C.

Lexington, Mo., Nov. 14, 1914.
H. J. Weber \& Sons Nursery Co.,

Nursery, Mo.
Gentlemen:-The trees and shrubs are here and in the ground this favorable weather. All were more than I expected in healthiness and size. Many thanks. I note that one tree is kept back until Spring for safe planting-thanks for the use of your judgment in this matter.

Yours truly, Mrs. S. A. M.

## Shrubs with Spines or Thorns

Arranged According to Height at Maturity

## Shrubs Suitable for Hedging

BERBERIS-In the five different forms.
HIBISCUS-In all the different varieties.

LIGUSTRUM-In all the different varieties.
TAMARIX-In all the different varieties.

## Deciduous Ornamental Shrubs

Our collection of Hardy Shrubs is one of the finest and most complete in the West. To parties desiring to lay out new grounds, or to fill out missing sorts, we would kindly ask correspondence, or, better, an inspection of our stock, which we will be pleased to show at all times.

To make it easier for planters to seleot shrubs for particular purposes, we have adopted letters to denote the average hight to which the various shrubs grow at maturity.

T-Denotes shrubs that grow 12 to 15 feet high.
L-Denotes shrubs that grow 8 to 12 feet high.
M-Denotes shrubs that grow 6 to 8 feet high.

## AMORPHA - False Indigo

A. Fruticosa. T.-A large, spreading bush with pinnate leaves and slender spikes of deep purple flowers, blooms in June after most of the spring-flowering shrubs are over.

## AMYGDALUS - Almond

A class of ornamental shrub or small tree introduced from the mountains of Asia Minor, and succeeding well in common garden soil. The flowers are very showy, produced in great abundance, and useful for their earliness. Fine plants to use in grouping or for lawns.
A. Japonica, var. Flore Rosea Plena. S.-Small double pink flowers born in abundance in May.
A. Japonica, var. Flore Alba Plena. S.-Small double white flowers born in abundance in May.

## ARALIA - Angelica Tree

A. Pentaphyla. S.-A shrub with long, slender branches and few spines. Fine for rocky slopes; foliage bright green and shiny. Flowers green in long umbels.
 A. Spinosa. See Deciduous Trees.

## AZALEA

A. Mollis. S.-A splendid, hardy species from Japan, and one of the most valuable flowering plants. Flowers large and showy, yellow and different shades of red, in trusses. Spring delivery only, 18 to 24 in.................... Each $\$ 1.25$
A. Pontica (Ghent). S.-Flower in great profusion in spring, the colors range from white to deep crimson. Should be treated same as Rhododendrons, and in this latitude are improved by giving slight protection.

Spring delivery only, 18 to 24 in..................... . Each $\$ 1.25$
For Japanese varieties of Azalea, see Evergreen Shrubs.

## BACCHARIS - Groundsel Tree

B. Halimifolia. M.-A pretty shrub with dark green foliage; especially attractive in autumn, with its fluffy white seed pods.

## BERBERIS - Barberry

B. Elegantissima. M.-A strong growing sort, with large green leaves and with long, stiff spines; quite ornamental.

## S-Denotes shrubs that grow 3 to 6 feet high.

B. Vulgaris (Green Leaved). M.-A handsome, deciduous shrub; flowers yellow, berries dark red. Of upright growth, with light green foliage. Each Per 10 Per 100

## BUDDLEIA

B. Lindleyana. S.-Flowers purplish-red, hairy; disposed in terminal racemose spikes; September; leaves ovate, shortly petiolate, serrate; branches angular, glabrous.
B. Intermedia (Intermediate). S.-Flowers lilac, with a white eye, in simple drooping spikes from 12 to 18 inches long, blooms during summer and autumn. Half hardy.
B. Variabilis (Variable). M.-Flowers lilac, densely crowded in large globose heads. Blooms in July and August. A tall hardy shrub.

D. C. Pride of Rochester. M.-A fine double variety, rather earlier than D. Crenata. Flowers pink in bud, white when fully expanded.
D. Rosea Plena (Doube Pink). M.-All the Deutzias are valuable and very profuse bloomers in the sixth month. This is one of the prettiest, tall-growing varieties.
D. Scabra. M.-A vigorous grower, with rough, dull green foliage and clusters of showy double white bell-shaped flowers, in June and July.
D. C. Watereri. M.-A new white variety from England, with larger and more double flowers.
D. C. Wellsi. M.-A strong-growing form, with single white flowers.

## DIERVHLLA - Weigela

Beautiful shrubs that bloom in June and July. The flowers are produced in so great profusion as almost entirely to hide the foliage. They are very desirable for the border or for grouping, and also as specimen plants for the lawn.

Prices, unless otherwise noted: Each Per 10 Per 100

D. Amabilis. M.-A fine pink flowering variety; one of the best. Amabilis Alba. M.-Flower white, changing to light blush at maturity. Strong growth.
D. Abel Carriere. M.-Bright rose; a choice sort. One of the best.
D. Candida. M.-Of vigorous habit, flowers pure white and produced in great profusion in June, and continue to bloom at intervals through the summer.
D. Desboisii. M.-A beautiful variety, with deep, rosecolored flowers, resembling Rosea, but flowers much darker. One of the best.
D. Eva Rathke. M.-A charming new Weigela; flowers brilliant crimson; a beautiful distinct, clear shade. $\begin{aligned} & \text { Each Per } 10 \text { Per } 100\end{aligned}$

D. Floribunda. M.-A fine variety; flowers dark red. A profuse bloomer.
D. Lavallei. M.-A new hybrid sort, with dark, reddish purple fowers, that blooms more than once during summer.
D. Madame Couturier. M.-A fine white.

D. Rosea. M.-One of the most popular shrubs known. Flowers bright rose.
D. Rosea Var. Kosteriana Follis Variegata (Kosters Weigela). M.-Foliage beautiful, margined with yellow; flowers pink.
D. Rosea Nana Variegata. S.-An exceedingly pretty variety, the variegation being very distinct.
D. Stelzneri. M.-A strong grower and abundant bloomer. Flowers dark red.
D. Van Houttei. M.-A good grower, with clear carmine flowers.

Each Per 10 Per 100

## ELEAGNUS - Oleaster

E. Longipes. S.-A handsome, shapely silver-leaved shrub, with an ornamental, reddish brown bark in winter; perfectly hardy and easy to grow; the bright yellow fowers appear in June on long stalks, but the greatest value of the shrub is in the fruit. which is produced in the greatest abundance along the whole length of the branches, oval in shape and about one-half inch long; color deep orange red; very showy and attractive. The fruit is not only very ornamental, but and attractive. The fruit is not only very ornamental, but has a sprightly, sharp, pleasant flavor, and makes a dell-
cious sauce when cooked.

## ELEAGNUS-Continued.

E. Angustifolia (Russian Olive). T.-A large shrub, sometimes of tree form, with long, narrow, silvery green foliage. The flowers are yellow, followed by yellow fruit.

## EXOCHORDA - Pearl Bush

E. Grandiflora. L.-A very hardy and handsome shrub from northern China and Japan, forming a bush 10 to 12 feet high in as many years. The pure white flowers are borne in clusters, on light, wiry branches, which bend beneath their load of bloom enough to be airy and graceful, and the unexpanded buds are like small, round beads of pearly whiteness.

## FORSYTHIA - Golden Bell

Prices, unless otherwise noted:
 flowers bright yellow.
F. Intermedia. M.-A form with erect, arching branches, foliage resembling Viridissima, and flowers like Fortuneil. Very free flowering.
F. Seiboldi. M.-On the order of F. Fortuneii, excepting that the branches have more of a weeping tendency; a profuse bloomer, flowers bright yellow.
F. Viridissima. M.-A fine hardy shrub. Leaves and bark deep green; flowers yellow. Very early in spring.
F. Suspensa. M.-A very early and showy spring bloomer, flowers bright yellow; branches long and slender.

## HALESIA Tetraptera. See Deciduous Trees.

## HAMAMELIS - Witch Hazel

H. Virginica. M.-A tall shrub; yellow flowers; late in fall, just before the leaves fall. Foliage changes to bright colors in the fall.

H. Alba. L.-Single, pure white.
H. Alba f. pl. L.-Semi-double, pure white
H. Anemoneflora. L.-Very large flower, measuring $31 / 2$ to 4 inches across; semi-double, red with a very deep red ase on outer petals. Stamens showing prominently.
H. Ardens. L.-Double violet, $2^{1 / 1 / 2}$ to 3 inches across flower; petals quilled; vigorous; very fine.
H. Boule de Feu. L.-Large, $31 / 2$ to 4 inches across flower; very double, well formed, light rose; petals flecked at base with cardinal; one of the finest reds; vigorous
H. Coelcstis. L.-Single, flowers large of a delicate shade of azure blue, showing red base.
H. Coelestis Alba. L.-Single white with crimson eye.
H. Coelestis Rosea. L.-Single, on order of Fleur Panache, but larger individual flowers.
H. Coelestis Purpurea. L.-Single purple, very large, showing large velvety base.
H. Coelestis Rubra. L.-Single bright red, with deep red base.
H. Duchesse d'Brabant. L.-Large, reddish lilac flowers. H. Duchesse d'Bretange. L.-Large, single. At times showing semi-double flowers; color rosy lilac with deep red base. H. Elegantissima. L.-Semi-double, white showing cardinal base, inner petals quilled.
H. Fleur Panache. L.-Single white, blotched and marked with red, showing cardinal base.
H. Grandifiora Superba. L.—White, semi-double, blush markings with deep cardinal base.
H. Jeanne de Arc. L.-One of the best; flowers pure white, double; strong grower.
H. Lady Stanley. L.-Very double, white with beautiful blush markings, cardinal base.
H. Leopoldii. L.-Two and one-half to three inches across flower; very double; deep rose.
H. Lucy. L.-Double, bright red, the brightest of our collection. A shade deeper than H. Anemoneflora.
H. Meehanii. L.-New variegated-leaved Althaea. Robust habit, compact and somewhat dwarf; leaves variegated; creamy white with irregular margins and green centers; never sun-scalds. Flowers single, $31 / 2$ to 4 inches across, of a satiny lavender sheen, and purple blotched at the base of each of the five petals, blooms perpetually from July to September.
18 to 24 inch
Each Per 10
$\$ 3 . \overline{5} 0$
H. Paeonifiora. L.-Double, bright rose, dwarf grower, free flowering.
H. Pompon Rouge. L.-Very double, rose, flowers large.
H. Pulcherima. L.-Very large, $31 / 2$ to 4 inches across flower; double white, shaded to pink; outer rows of petals broad and show cardinal base; inner petals quilled. A very fine variety. Strong grower.
H. Purpurea. L.-Purple, semi-double, showing cardinal ase.
H. Puneceus Plena. L.-Semi-double, frequently showing individual single flowers; bright red, with small cardinal base.
H. Ranunculoeflora Plena. L.-Double, with full high center, petals notched; blush white, crimson at base.
H. Rubra. L.-Double red.
H. Rubus. L.-Single red, showing cardinal base, single and almost identical with Coelestis Rubra.
H. Rubra Plena. L.-Very double; red, fading to a lilac as blossoms develop.
H. Speciosa Rubra. L.-Double red, tinged with purple, deep cardinal base on outer petals.
H. Variegata fl. pl. M.-Variegated leaves, flowers very double, seldom open.
H. Violet Claire. L.-Similar and almost identical with Purpurea.

## HYDRANGEA

Hydrangea Arborescens Grandifiora. S.-This beautiful shrub is being sent out under various names, as "Snowball shrub is being sent out under ," various names, as Snowball Hydrangea." "Hills of Snow, etc. This New American Hydrangea is believed to be the most ering shrub introduced for many years.

The plant attains a height of five or six feet, with about the same breadth, is far more graceful than the old form of Hydrangea Arborescens. Flowers are borne in large trusses beautifully formed and of dazzling whiteness, rendering it a plant of peerless beauty. Seems to do best in rather damp or shady location.

The flowers, when cut, remain in good condition a long time, thus making the plant especially useful for cut fiowers.
 18
2 to 24 inch 4.00

## HYDRANGEA-Continued.

H. Paniculata (The Type). L.-This shrub is increasing in popularity as it is of strong habit, hardy, has handsome foliage and good bushy growth. The panicles of white bloom are more open than those of the Grandiflora. Can
be used by itself or in borders. A splendid plant for any be used by itself or in borders. A splendid plant for any
Each Per 10 purpose.

Hydrangea Paniculata Grandiflora (Bush Shape). M.This is one of the most valuable hardy shrubs in cultivation. It attains a height of six to eight feet, and is perfectly hardy in all parts of the country. The flowers are white, borne in immense pyramidal panicles nearly a foot in length. It commences flowering in July and continues until November. This is the finest flowering shrub for cemetery planting we know of.

L. Regelianum (Regal's Privet). M.-A fine, hardy variety, desirable when grown singly as a specimen, or in mass planting; also suitable for hedges. This is one of the berried varieties. Each Per 10 Per 100

L. Sinensis Nana. S.-A dwarf variety of very pleasing effect. Fine for a medium hedge; very graceful; can be trimmed if desired. Berries remain on plant until quite late.

## LONICERA TARTARICA - Upright Honeysuckle

Prices unless otherwise noted: Each Per 10 Per 100

L. Tartarica Var. Alba. M.-Creamy white, fragrant flowers; forms a high bush. May and June.
L. Tartarica Var. Rosea. M.-Pink flowers, which contrast beautifully with foliage. June.
L. Bella Albida. M.-Flowers white, bright red fruit in great profusion; very fine.
L. Fragrantissima. M.-In sheltered situations the dark green leaves of this shrub are retained nearly all winter. Its pretty pink and white flowers are numerous, but not very showy. Delightful fragrance. It is easily trained into a handsome bush. Each Per 10 18 to 24 inch . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.30$. $\$ 2.50$

L. Ledebouri. S.-A distinct species with red flowers in May.
L. Morrowii. M.-A fine variety from Japan; valuable for its handsome red fruit.
L. Rubra Grandiflora. M.-A beautiful shrub, very vigorous, and producing large, bright red flowers striped with white in June.
L. Ruprechtiana. S.-A fine variety from Manchuria, especially valuable for its showy red fruit.
L. Virginialis Alba. A fine white variety.

## PHILADEIPHUS - Syringa or Mock Orange

For grouping with other shrubs, forming large screens or hedges which may not require pruning, or used as single specimen lawn plants they are desirable. They will bear heavy pruning and quickly reassume their free, semi-pendulous, picturesque effect.
Prices unless otherwise noted: Each Per 10 Per 100

P. Coronarius (Mock Orange). L.-Early June Fragrant pure white flowers, in dense clusters so numerous as to bear the branches down when fowering. One of the best.

## PHILADELPHUS-Continued.

P. Cor. Follis Aureis (Golden Syringa). D.-A dense growing form, with clear, golden-yellow foliage well retained in color all summer. One of the best golden-foliaged shrubs
offered.

P. Cor. Flore Pleno (Double-Flowered Syringa). L.-Partially double flowers; very fragrant.
18 to 24 inch .................................. Each Per 10 Per 100

P. Grandiflorus (Large Flowering). L.-Has showy large flowers, slightly fragrant; branches somewhat straggling.
P. Gordonianus (Gordon's Syringa). L.-Vigorous grower and profuse bloomer; flowers slightly fragrant; late bloomer.
P. Lemoineii Erectus. M.-A charming variety of upright growth; flowers small, yellowish white, fragrant, completely covering the plant.
P. Napalensis. M.-A variety imported in 1909, said to have special merit. Vigorous grower.
P. Primuloeflorus. L.-Flowers almost double; pure white.
P. Speciosus. L.-Very showy flowers; late. Distinct habit.
P. Zeheeri. L.-Free flowering; medium sized single flowers.

## POTENTILLA - Cinquefoil

A dense, medium-growing shrub of easiest culture in any soil, and succeeding admirably in the driest situations.
P. Fruticosa. S.-July to September. Narrow foliage, with silky under surface. Flowers yellow and borne in continuous succession for a long season.

## PTELEA - Hop Tree or Shrubby Trefoil

P. Trifoliata. L.-A large shrub or small tree; rapid growth; fruit in clusters and winged. Blooms in June. 4 to 5 ft . ...................................... $\$ 0.35 \quad \underset{\$ 3.00}{\text { Pach }} \begin{array}{r}\text { Per } \\ \$ 25.00\end{array}$

## RHAMNUS

R. Catharticus (Buckthorn). L.-A stiff, twiggy shrub with white flowers in June and July, suaceeded by black berries. Splendid for massing in parks and public grounds.

## RIBES - Currant

Vigorous, remarkably healthy plants, of easiest culture. Besides this ornamental foliage and flowers, the fruit of several of the sorts is showy and very attractive. Valuable for grouping as a class or with other shrubs.

R. Aureum (Missouri Currant). M.-May. Golden yellow, spicily fragrant flowers in showy racemes. Foliage shining and glabrous, taking on showy. autumnal coloring.
R. Gordonianum (Gordon's Currant). M.-May and June. A valuable hybrid with orange-red flowers in showy spikes. Very choice.
R. Sanguineum Var. Flore Plena (Double Crimson Flowers). M.-Flowers very double, showy. This and its type do best in somewhat protected situations.

## RHODOTYPUS - White Kerria

R. Kerrioides. L.-A choice and rare Japanese shrub, recently introduced. It is a slender branched bush, with very pretty, deeply veined leaves, and pure white flowers, borne at intervals all summer. Each Per 10 Per 100

$\begin{aligned} & 2 \text { to } \\ & 3 \text { to } 4 \mathrm{ft.} . \\ & \mathrm{ft} \\ &\end{aligned}$

## RHUS - Sumach

R. Aromatica (Fragrant Sumach). S.-A native variety, exhaling a strong odor. Flowers greenish white; leaves lobed.

R. Copallina (Dwarf Sumach). S.-Shining green foliage, changing to rich crimson in autumn; greenish yellow flowers in August. 18 to 24 inc
R. Cotinus (Purple Fringe). L. - A much admired small tree or shrub for its curious fringe of hair-like flowers that
cover the whole surface of the plants in middle summer.

R. Typhina (Staghorn Sumach). L.-A large shrub or tree, brilliant foliage and scarlet fruit in autumn.

## RUBUS - Bramble

R. Odoratus (Flowering Raspberry). S.-Foliage large flowers pretty rosy purple.

See Deciduous Trees for the Grafted Standard Trees of this variety.

## SAMBUCUS - Elder

Rapid-growing shrubs, with ornamental foliage, flowers and fruit. Will thrive in all soils, but give best fruiting results in that of a moist nature. The Golden Elder is one of the finest golden-leaved shrubs, and is very useful. It shows its color best on a dry soil. Each Per 10 Per 100

S. Canadensis (Common American Elder) L. Broad pani cles of white flowers in June; reddish purple berries in autumn. A well known native shrub.
S. Nigra (Black-Berried Elder). L.-Of medium growth, with purplish-black berries in September.
S. Nigra Var. Aurea (Golden). L.-A beautiful goldenfoliaged form. Very useful for foliage effect.
S. Nigra Var. Laciniata (Cut-Leaved). L.-Deeply cut foliage.
S. Nigra Var. Variegata (Variegated). L.-Foliage beautifully variegated with silver and green.
S. Racemosa (Red-Berried Elder). L.-White flowers in panicles in spring, followed by bright red berries.

## SPIREA - Meadow Sweet

An indispensable class of small to medium-sized shrubs, embracing a wide range of foliage, habit of growth, color of flowers and season of blooming. All of easiest culture in all soils.
Prices unless otherwise noted: Each Per 10 Per 100

to Anthony ne of the most beautiful of dwarf flowering shrubs, It mekes a low, compact bush, 15 to 18 inches high, and is makes a low, compact bush, 15 to 18 inches high, and is oovered nearly the whole growing season with large umbels of deep crimson flowers. Perfectly hardy, it makes a fine compact plant for low clumps or for bedding purposes. G as a pot plant, it is a fine plant for house decoration.

S. Billardii. M.-Medium sized shrub, producing spiked panicles of flowers, bright rose color.

## SPIREA-Continued.

S. Bumalda. S.-A spreading, low bush, with dark leaves brightened by corymbs of pretty, light pink flowers in May, and at intervais all summer. Each Per 10 Per 100 18 to 24 inch . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.30$ \$ $\$ 2.50$ \$20.00

S. Chamaedrifolia. M.-A beautiful species, with small wiry branches, covered in June with clusters of white flowers.
S. Collossa. M.-A choice species; flowers in flattish umbels, bright pink and verv showy.
S. Collossa Alba. D.-Of compact growth, with upright branches, crowded with large, flat clusters of white flowers nearly all summer. Each Per 10 Per 100

S. Douglassi. M.-Immense terminai spikes of deep rosecolored flowers. One of the best.
S. Fontenayii Alba. M.-A pretty variety, with white flowers in summer. Upright growth and pretty, light green foliage.
S. Fontenayii Rosea. M.-Of same habit of growth and foliage as Font. Alba, but flowers are rosy white.
S. Multiflora Arguta. S.-Of dwarf habit; flowers clear white. The best very early flowering white Spiraea. Early May.

S. Opulifolia (Nine Bark). M.-A strong growing shrub with white flowers.
S. Opulifolia Aurea. M.-Very conspicuous from the golden hue of its foliage; of strong growth.
S. Prunifolia, Fl. P1. M.-Very distinct, with numerous small, double white flowers, blooming early.
S. Reevesii (Lance-Leaved-Single). M.-One of the most ornamental; showy flowers, pure white in umbels and very numerous.
S. Reevesii, Fl. Pl. (Lance-Leaved-Doubie). M.-A perfeot gem, each individual flower as double as a Ranunculus and very conspicuous.
S. Salicifolia (Willow-Leaved). M.-Long, narrow, pointed leaves, and rose-colored flowers in June and July.
S. Thunbergii (Thunberg's). S.-Dwarf habit and round, graceful form, branches slender and somewhat drooping; foliage narrow and yellowish green. Flowers small, white. Esteemed on account of its neat, graceful habit and early blooming.

Each Per 10 Per 100

S. Van Houtte. M.-The grandest of all the Spiraeas. It is a beautiful ornament for the lawn at any season, but when in flower it is a compiete fountain of white bloom, the foliage hardly showing. Ciusters of twenty to thirty flat, white florets make up the racemes, and these ciusters are set White florets make up the racemes, and these ciusters are set close alo.

## STEPHANANDRA

S. Flexuosa. S.-A graceful shrub with spreading, drooping branches, elegant foliage. Flowers pure white, panicled racemes. June. Foliage turns to handsome purplish coloring in the fall.

## STAPHYLEA - Bladder Nut

S. Colchica. One of the finest eariy flowering shrubs; flowers white, fragrant and disposed in clusters. Blooms at the same time as the Lilac.

S. Persica (Persian Lilac). M.-Of more slender growth and finer foliage than the Common Lilac. We have these in pink and white colors. Each Per 10

S. Rhotomagensis Var. Rubra (Rouen Lilac). M.-A distinct hybrid variety, with reddish flowers; panicles of great size and very abundant. One of the flnest lilacs.

S. Japonica. M.-A species from Japan, becoming a good sized tree. Foliage dark green, glossy; leathery; flowers creamy white, odorless, in great panicles. A month later than other lilacs.

S. Josikaea (Hungarian Lilac). M.-A fine, distinct species, of tree-like growth, with dark shining leaves and purple flowers in June, after the other liiacs have done blooming. Esteemed for its fine habit and foliage. Each Per 10

S. Villosa (Japan Liiac). M.-A species from Japan. Large branching panicies; flowers light purple in bud, white when open, fragrant. Especially valuable for late fowering. Single.

## Single and Double Varieties of Syringa Vulgaris

For a number of years we have been collecting the finer varieties of "Foreign Lilacs" from various sources, and believe we now have as fine a collection as can be found anywhere.

The great improvement in the lilac in the last eight or ten years has been marveious. No park or large ground is now complete without a good coliection of these delightful novelties. The flowers so far surpass the oid varieties that there is no comparison, excepting that they are of the Lilac family.

It has been nothing unusual for us to cut spikes of some of these varieties that measured 12 to 14 inches in iength and from 6 to 8 inches in breadth, from 3 and 4 year old plants, that brought from 15 cents to 25 cents per spike in the flower market.
In describing the varieties we mention those that are double; those not so described are singie. All are beautiful in their distinct shades and markings. They ali attain a height of from 8 to 12 feet in time, depending on iocation and soil. inch Each Per 10 Per 100

$\qquad$

## TAMARIX - Tamarisk

The Tamarisks are hardy shrubs, of strong growth, foliage light and feathery, their flowers delicate and fringing, usually in some light shade of red or pink. They will grow anywhere. Lately the variety $T$. Africana has been used for hedging, and it is indeed very pretty for that purpose; if pruned several times during the season it is even finer than the best of Evergreen hedges and from a distance frequently taken for such. We are growing them more largely now for this purpose, and customers wanting something out of the ordinary will do well to try a hedge of them.

## A NEW FORAGE PLANT

Pueraria Thunbergiana (Japanese Kudzu Vine)-We want all of our customers, who are interested in horses, cattle, hogs, etc., to give this plant a trial. If you have a pasture lot, a timber belt, a rocky slope, we believe you will do well to give this plant a trial.

We have a plant in our trial grounds that is now five years old that covers a space of approximately 150 feet in diameter after having been cut back frequently, it is nothing unusual for this vine to grow 60 to 75 feet in a season.

On August 29 th, 1913 , we wrote to the Department of Agriculture, Washington, D. C., asking them for a report on this plant and to send us any literature they might have on the subject. In reply we received a letter from Mr. R. A. Oakley, Agronomist; of the Bureau of Plant Industry on Forage-crop investigations, to the effect that in parts of Florida where this plant had been tried that it had given satisfaction, but that its cultivation at the Experimental Station at Washington, D. C. was at a standpoint. But that he believed it to be well worth testing, but suggested that preliminary trials be made on a small scale, with a view of determining just what could be done in this section of the country.

From a department circular received at the same time, No. $75311-13$, published in January, 1913, we copy the following:
"Kudzu', is a large-leaved, woody, leguminous vine, native to Japan, which grows with remarkable rapidity. It succeeds well in every part of the United States where it has been tried, and grows in various types of soils. Where the summers are warm and moist it grows with great luxuriance. Kudzu is a most excellent vine for arbors and porches, for which purpose it is grown in most of the southern cities, climbing to a height of 60 feet or more. It succeeds well, however, as far north as Nova Scotia. The leaves resemble in a general way those of the common bean, but they are larger and angular lobed, besides being tougher in texture; the stems and leaf stalks are somewhat hairy.
The Japanese utilize Kudzu in many ways, growing it on rough, rocky lands or hillsides too steep to be cultivated. The fibre of the stems is used in making "grass cloth," "portmanteaus," etc. The thick roots are rich in starch of a high quality, which is used in making cakes and noodles. They also make hay from the Kudzu Vine, especially to feed to sick horses, as it is said that they will eat this greedily when they refuse other feed. It is usually fed green.

Kudzu has been grown in the United States for many years, but it is only of late years that it has created interest as a forage crop. Mr. C. E. Pleas, of Chipley, Fla., is probably the first person that took up the cultivation of this plant as a forage crop. It is reported that as much as 10 tons of hay have been cut from an acre in one season in three cuttings. A field of Kudzu when full grown presents. much the same appearance as a thiok field of cow peas or soy beans. It can be readily cut with the mower, and the hay cures more readily than most legumes, as the leaves are less juicy.
Planting-A field of Kudzu is probably best established by planting 1-year-old plants. These should be set 10 feet first year, the first season will pretty well cover the ground with prostrate runners. The second year a fair crop should we obtained, but will not produce best results until the be obtained, but will not produce best results untird year. Should be planted early in the spring.

Feeding Value-So far as chemical analyses indicate, Kudzu is very nutritious, being comparable to clover and alfalfa. Horses, cows and sheep eat the green leaves readily as well as the hay. Its actual value as a feed, either for meat or milk production, remains to be determined by further experiment, but there is little doubt that it is high.

While we have known this plant for a number of years and believe that there is a big future for it in this country, we only advise trying it in a moderate way and on land that would ordinarily be used as pasture land. It takes several years before the plant becomes well enough established to produce the best results. We would like to see only a limited number of the plants to offer for spring, only a limited
1914 delivery.
Special Introductory Offer: 10 plants for $\$ 1.00$, postage paid to any part of the United States.

## EVERGREENS - Coniferae

Our trees have all been transplanted two or three times, are handsome, selected trees, well branched and rooted, sultable for lawns, etc.
Evergreens can be most successfully transplanted a short time before they are ready to start into growth in the spring. They can also be planted safely very early in the fall. The soil to receive them should be mellow and fine, and great care taken that it is well packed about the roots after they have been well spread out in a natural position.
Wherever possible we dig with ball of earth and wrap same in damp burlap; otherwise we pack roots in wet moss immediately after digging.
Caution-Do not let the sun or wind strike the roots of Evergreens even for a few minutes; you will kill them if you do. Plant immediately on receipt; give thorough drenching of water, but do not apply over the foliage.
Specimen Trees and sizes not quoted herein will be priced on application.

## ABIES - Fir

A. Balsamea (Balsam Fir)-A very regular, pyramidal tree of rapid growth. Leaves dark green above, silver beneath.
18 to 24 in. Dug with ball, each . $\$ 0.75$
.1 .25

## PSEUDOTSUGA

## See Tsuga Canadensis.

## THUJA - Arborvitae

T. Occidentalis (American Arborvitae)-A well known native species of great value. It forms an upright conical tree of only medium size, and is especially valuable for screens and hedges.

## Evergreen Shrubs

Evergreen shrubs are coming into use more and more, as they are so desirable in landscape work. The follage helps out and enlivens the bareness of deciduous trees and shrubs in winter. They are all fond of ehady places and are suitable for north sides of houses, garages and north hill sides. The soil for this class of shrubs should be carefully prepared with leaf mold, peaty soll and should be mulched anpared with with well decomposed manure or partly decomposed forest leaves.

Spring is the proper time to transplant.

## AZALEA AMOENA - (Imported)

A bushy, dwarf grower with small green leaves that deepen to a lustrous coppery hue in winter. In April or May the whole plant is covered with a mass of brilliant, claret-color ed flowers that retain their beauty for several weeks. Very ornamental and desirable for edging of drives and walks or for bordering beds of Kalmia, Ilex, etc.
12 to 15 inches, well set with flower buds
15 to 18 inches, well set with flower buds
18 to 24 inches, well set with flower buds

36 inch stems, crown 26 to 28 inches in diameter, each 9.00
45 inch stems, crown 26 to 28 inches in diameter, each 12.50

## Roses

Soil-Roses delight in a clay loam, enriched with well-rotted barnyard manure. Dig up the soil thoroughly to a depth of 12 to 15 inches, pulverize well; do not raise beds above the level of the surrounding soil. Soak the bed occasionally during the summer with weak manure water.

Location-Roses delight in an open, airy situation, unshaded by trees and buildings. Always plant in solid beds and each class for itself.

When to Plant-We advocate planting in the fall, in friable soil, firmly packed with the foot, but do not bruise the roots; give good soaking of water after planting. As soon as severe freezing weather sets in, raise the earth around the plant three or four inches, cover entire bed with dry, light manure, then cover with leaves, straw or evergreen boughs, plant three or four inches, cover entire bed with dry, light manure, then cover with leaves, straw or evergreen boughs, weighting the former with pieces of wood or limbs. Dormant plants set in the spring
growth has started. No plant suffers more by being planted late than does the Rose.
Pruning-This should be done during March. For Hybrid Perpetauals remove about one-third to one-half of the previous year's growth. Strong growing varieties require less pruning back than weak growing ones. In the everblooming class two-thirds of the previous year's growth should be removed. Cut out all old or decayed wood annually, also all feeble branches and such as are crowding each other. Some of the Hybrid Perpetual varieties can be made to bloom again in the fall, if pruned soon after spring blossoming time is over.
Insects and Diseases-Do not let these discourage you. There are now a number of remedies, easily applied, that will rid your plants of any insects very quickly if applied promptly. (See Spray Calendar and Formulas in this Catalogue).

## HYBRID PERPETUAL ROSES - Rosa Hybrida Cifera

This class of roses is admirably suited for garden culture, for the formation of rose beds, hedges and permanent plantations, where hardy varieties of roses are desired. They are of easy culture and luxuriant in a deep, rich soil. They are of easy culture and luxuriant in a deep, rich soil. They are benefited by mulching in the fall of the year. Prune according to the habit of the growth, cutting back close all
weak shoots and shortening the long canes to a convenient weak
length.

The plants offered by us are strong field-grown, delivered in dormant condition. Fall or early spring delivery.
No. 1, 2-year-old ............................ $\begin{aligned} & \text { Each } \text { Per } 10 \\ & \$ 3.00 \text { Per } 100 \\ & \$ 25.00\end{aligned}$

American Beauty-A variety too well known to require description; color a rich red, passing to crimson; fragrant. A rapid grower and constant bloomer

Alfred Colomb-Carmine crimson; large, full, fine globular form.

Anna Diesbach-Bright rose color, very large and showy; particularly fine in bud; flowers slightly cupped. A vigorous grower; one of the best.

Baron de Bonstetten-Flowers large, very`double and full; color a rich dark red, passing to deep, velvety maroon; highly scented.

Black Prince-A very fine, dark crimson variety.
Boule de Neige (Hybrid Noisette)-A finely formed, pure white rose, occasionally shows light flesh when first opening. Beautiful shell-shaped petals, evenly arranged.

Conrad Ferdinand Meyer-The rose has Rugosa blood in its make-up and is classed by some as a Hybrid Rugosa. This is a grand rose; vigorous grower, free bloomer; flowers large, perfectly double, cup-shaped. Color deep, bright, vivid, intense pink, with a penetrating fragrance.

Clio-Flesh color; flowers often six inches in diameter; very fine.

Coquette des Alps-One of the finest pure white hybrid perpetuals; large, full, finely formed flowers; color pure white, sometimes faintly tinged with pale blush; profuse bloomer.

Duke of Edinburgh-Brilliant crimson-scarlet, shaded with maroon.

Earl of Dufferin-Very dark red, double. Extra fine. Vigorous.

Eugene Furst-Large and full, fine form. Color deep red shaded crimson. Profuse bloomer. A most charming and grand rose.

Francois Levet-Light pink, fragrant. One of the best.
Frau Karl Druschki-Very fine, large, beautiful, pure white. The best white Hybrid Perpetual introduced in years.

General Jacqueminot-Brilliant crimson; very large, globular and excellent; a free bloomer; unsurpassed in its clear, rich crimson, scarlet color.

Gloire Lyonaise-Creamy white. Fine in bud.
J. B. Clark-Intense scarlet, shaded crimson-maroon; very dark and rich; fragrant.

Mad. Plantier-This is the old favorite June rose. Vigorous grower. Very hardy. Pure white double flowers. Fragrant.

Mad. Masson-Large and double; color a reddish crimson; of fine form; a fine autumn bloomer.

Marchioness of Lorne-Rich rose color, shaded in center with vivid carmine; extra fine.

Margaret Dickson-One of the best white Hybrid Perpetuals for garden planting. Color white, with pale flesh cen-
ter; petals very large, well shaped and of immense substance. Flowers produced singly on long, stiff stem, fine form, and have a Magnolia fragrance. Vigorous.

Marshall P. Wilder-A favorite variety, it certainly is a grand rose. Color deep, rich, glowing red.

Mrs. John Laing-Delicate pink, fragrant, a continuous bloomer.

Paul Neyron-Flowers of immense size, often five inches in diameter. Color deep clear rose, very fresh and pretty. The plant is a strong, healthy grower, with glossy foliage, and is one of the most prolific bloomers in the Hybrid class, young nlants in the nursery rows blooming almost without intermission from June to late October.

Prince Camille de Rohan-Very dark. This rose is of a rich, velvety crimson, passing to an intense maroon-shaded rich, velvety crimson, passing to an intense maroon-shaded black, large, fu
very handsome.
Ulich Bruner-Extra large, bold flowers, full and globular. Color rich, glowing crimson. elegantly flamed with scarlet.

## HYBRID TEA ROSES - Rosa Thea Hybrida

This class of roses is suitable for general cultivation, as they are usually our very best roses, blooming continuously throughout the season. Require more care in winter prothroughout the season. Rybid Perpetuals in this climate and fection than to the Hybrid Perpetuals in this climate and supply of fine flowers when roses of the hardy variety are supply

## VARIETIES

Antoine Rivoire-Too much' cannot be said of this grand rose; words will not describe its beauty. It is a vigorous grower, with fine-shaped buds and flowers; color salmon flesh in center to the edge of its petals, shading to a creamy white, with a delicate pink tinge; very fresh and clean.

Etoile de France-The gold medal rose of France, and claimed by the raiser, J. Pernet Ducher, to be the finest rose he has ever sent out. Strong, vigorous grower. Flowers claimed by the raiser, J. Pernet Ducher, to be the finest rose clear, red crimson velvet; very fragrant and keeps well.

Helen Gould-Free growing and vigorous for its color, it is remarkably constant in blooming, every new shoot pro-
ducing a flower. The blooms are bright rosy carmine red, ducing a flower. The blooms are bright rosy carmine red,
the buds are well formed, the fragrance is delightful, and taken altogether, it is a variety that should be generally taken al

Kaiserin Augusta Victoria-Strong grower, free bloomer, perfect flowers. Large fine buds, pure white, does not pink up when planted out. A superb variety.

La France-An old and well-known variety. Color silvery rose shades, with pink, it has a satin sheen over all its petals. Hardy, continually in bloom; first class in every way.

Madame Caroline Testout-A charming rose. Clear bright satiny-pink; flowers very large and extremely showy, quite distinct.

Madame Jules Grolez-An exceedingly free-blooming variety, with very bright, large, full, finely formed flowers; buds beautiful. Color a distinct and charming shade of satiny pink. We are delighted with this new addition to our list.

## HYBRID TEA ROSES-Continued.

Meteor-We have no red rose that is better for general purposes or that gives so many perfect shaped flowers on nice long stems. The color is rich, velvety crimson, exceedingly bright and attractive. The plant is of rigorous for summer bedding or pot culture.

Pierre Guillot-A bright, dazzling, crimson, passing to brilliant carmine. Flowers large, very double, constant bloomer. Medium grower.

President Taft-This rose was raised in Cincinnati, the home of President Taft, and was named in his honor. It is a remarkable pink rose. Color a shining, intense, deep pink. Plant is a fine grower, free bloomer, good size and form, fragrant, is in a class by itself as to color.

Rhea Reid-Flowers large, rich red, very double, fragrant and continuous bloomer; strong grower; resists both mildew and black spot.
Richmond-This is said to be the best red forcing variety yet produced. Strong, vigorous grower. Color deep red, long pointed buds, elegant dark foliage.

White La France (Augustine Guinnoisseau)-This is a beautiful rose of the La France type; color a fawn white.
William Shean-Purest pink, petals shell-shaped, four to five inches long; flowers of immense size and substance and five inches long; flowers of immense size and
of perfect form; free blooming and distinct.

## TEA ROSES - Rosa Indica Odorata

Tea Roses are distinguished from others by the delightful fragrance of the flowers and by the delicate shades of colors. They bloom the entire summer and autumn.

Etoile de Lyon-This is the best yellow bedder to date. Color lemon yellow, buds and blooms very double and of large size. A good, free bloomer.

Maman Cochet-This is our favorite rose. It is of the largest size; the flower is built up or rounded and very double; the color is a deep, rosy pink, the inner side of the petals being a silvery rose, shaded and touched with golden yellow. Very vigorous; deliciously fragrant.

Marie Guillot-One of the standard varieties of Tea Roses, which as yet has not been equaled by any rose of its color, splendid for any use. Especially desirable for summer rose splendid for any use. Especially desirable for summ
beds. Color pure white, sometimes tinted pale yellow.

Marie Van Houtte-This exceedingly lovely rose cannot be surpassed by any rose of its color. In the open ground it is truly magnificent. The fowers are extra large and are deliciously fragrant. The color is pale canary yellow, shading to pale rose.

Mrs. B. R. Cant-A beautiful new rose on the style and color of Papa Gontier. It is a free grower and bloomer.
White Maman Cochet-A sport from Maman Cochet, which it resembles in every particular except color, which is pure white, occasionally tinged with blush.

William R. Smith-The soft blending of the salmon-pink and the rose-pink and the beautiful flesh tints in this rose give it a singular resemblance to the entrancing flush on a maiden's cheek. A fine bedder.

## CHINA ROSES - Rosa Indica

This class is of luxuriant growth and are constant bloomers, hardier than the Tea and Hybrid Tea Roses. Fine for bedding or massing for color effect.

## Price on spring delivered plants, in pots only:

Strong plants in 4 and 5 -in. pots..... Each Per 10 Per 100

Gruss an Teplitz-One of the brightest colored roses grown. Color dark rich crimson, changing to bright scarlet, shading to velvety red. Blooms continually; flowers good sized and delightfully fragrant. One of the finest and most useful bedding roses extant.

Hermosa-It would be but a waste of words to write a lengthy description of Hermosa. It is too well known and
too great a favorite. It is always in bloom and always beautiful; the color is the most pleasing shade of pink, very fragrant. A grand rose for bedding or pot culture.

Queen's Scarlet-Fiery-red, good bedder; a fine variety.

## POLYANTHA ROSES - Rosa Polyantha

Miniature roses derived from the Climbing Polyanthas. Of dwarf habit, profuse bloomers. Fine for bedding or for edgings. Perfectly hardy.

Price on fall delivered plants as dug from Nursery:
Strong plants $\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots{ }^{\text {Each }}$ Per 10 Per 100
Medium plants
Medium plants .................................. $30 \quad 2.50 \quad 20.00$

Price on spring delivered plants, in pots only:
Strong plants in 4 and 5 -in. pots...... $\$ 0.40$ Per 10 Per 100

Baby Rambler (Madame Norbert Levavasseur)-"The new dwarf everblooming Crimson Rambler." The greatest advertised, the most talked of rose ever introduced in America. Like Crimson Rambler in bloom except that it is dwarf and a true everbloomer. In bloom all the time. A most wonderful rose.

Baby Rambler White (Catherine Zeimet)-In habit of growth like Baby Rambler Red, but with small double white flowers, in clusters. Fine for cemetery planting.
Clothilde Soupert-Here we have a rose that for bedding out doors or for pot culture is hard to beat. Frequently the entire foliage is hidden with bloom. Mrequently flower, variable color, from almost pure white to deep pink. Always in bloom
Ecarlate (Boytard, 1907).-Is a darker color than "Liberty" and more fragrant than "La France." What more do you want us to say about it? "Ecarlate" is without question the finest red bedding Rose to date.
3 -in. pots, ready April $15 \ldots .$. is the strongest growing in the 1910). -This grand Rose is the strongest growing in the Hybrid Tea class. The blooms, which are produced with the greatest freedom, are carried on stiff and erect stems, and are of the largest size, of perfect formation and highly perfumed. Color clear, im-perial-pink; a glorious flower.
3-in. pots, ready April 15 ..
Eugene E. Marlitt (Gind Rose, none better; (Geshwindt, 1900).-It is a grand garden Rose, none better; being exceptionally healthy, vigorous and free-blooming. The flowers are large; very double; of a rich bright carmine with scarlet tones.

Colonel R. S. Williamson (Alex. Dickson, 1907).-Color satiny white with deep blush center; blooms large, well formed, with high pointed center and carried on stiff stems. 3-in. pots, ready April 15.............................Each 30 cts.

General Superior Arnold Janssen (Leenders, 1912). -This Rose has all the good qualities of "Jonkheer J. L. Mock" and "General Superior Janssen," and is just between them in color, being a deep glowing carmine, carried erect on stiff, robust stems. Very free and in every way a noble, firstclass Rose.
3-in. pots, ready April 15........................Each 75 cts.
Grossherzog Friedrich (Lambert, 1909). -Color bright rosyvermilion, overlaid with a yellowish cast. Awarded the highest prize at Mannheim. Among the bloomers this Rose stands at the head of the list for freedom.
3 -in. pots ready April 15 th........................Each 30 cts.
Madame Jenny Gillemot (Pernet Ducher, 1905). -Buds long and pointed, deep saffron-yellow, opening canary, with dark golden shadings; blooms large, petals immense; opens very freely: a fine upright grower of branching habit; exquisitely beautiful; very large in size.

Sunburst (Pernet Ducher, 1912). -This magnificent giant yellow Rose is a fine forcer; it stands head and shoulders above all others of its color and will rank with American Beauty and the Killarneys in value and grandeur. It has long, pointed buds, which can be cut tight for market. The color is orange-copper or golden-orange and golden-yellow; edge of petals lighter: all intense shades, extremely brilliant in effect. It puts all the vellows to sleep when it comes to bedding in the garden. The golden-yellow color stays right with the flower until it fully finishes.
3 -in. pots ready April 15.
Each 50 cts.

## BOURBON ROSES - Rosa Bourboniana

Price same as Polyantha.
Souvenir de la Malmaison-A superb old favorite, with great flowers of clear flesh white, double to the center. One of the finest fall blooming roses.

## CLIMBING HYBRID TEA ROSES

This class of roses require some protection in this climate; a good plan is to lay them down and cover with straw or leaf mulch.
Price on fall delivered plants, as dug from Nursery:

Cl. Kaiserin Augusta Victoria-A climbing "Sport" of the fine variety whose name it bears, identical with it in hardiness, freedom of bloom, color and size of flowers.
Cl. Madame Caroline Testout-A rampant climber. In flower identical with Mme. Caroline Testout. Beautiful glowing pink.
C1. Meteor-The brightest colored of all roses. It is free, persistent bloomer, strong grower, in bloom all the time; a true everbloomer.

## CLIMBING HYBRID PERPETUAL ROSES

C1. Frau Karl Druschki-An exact counterpart of Frau Karl Druschki in every way, except that it is a most vigorous climber. Flowers snow white. Strong plants
....Each \$0.50

## RAMBLER ROSES - Rosa Polyantha

Under this class we list the Rambler sorts; they are perfectly hardy and are suitable for trellises, fences, porches, pillars, pergolas, arches, etc., etc.

Price on dormant plants, fall or early spring delivery: Strong plants . . . . . . . . . . . . . . . . . . . . . . . $\$ 0.35$ Pach $\begin{aligned} \text { Per } 10 & \text { Per } 100 \\ \$ 3.00 & \$ 25.00\end{aligned}$ Cl. Baby Rambler-This is a true everblooming Crimson Rambler. There has been a widespread demand for a Crimson Rambler that would bloom more than once in a season. This is a climbing form of the Baby Rambler, embracing all its good qualities.

Crimson Rambler-The well-known rose, of which there have probably been more planted than any one-half dozen other varieties put together. Strong grower, flowers in panicles of 30 to 40 blooms, color bright vivid crimson.

Dorothy Perkins-See Wichuraiana Roses.
Flower of Fairfield-Said to be an everblooming Crimson Rambler. Color deep crimson in large clusters.

Philadelphia Rambler-It differs from the Crimson Rambler in two important particulars. First, the color is brighter, deeper and more intense. Second, the flowers are perfectly double to the center. It is a strong, healthy grower, free and abundant bloomer.
Tausendschon or Thousand Beauties-Flowers when opening are a delicate shade of pink, changing to rosy-carmine. It gets its name from its many flowers and the variation in coloring. A beautiful rose. You want to plant a few of them.

White Rambler (Thalia)-In habit of growth, foliage, manner of blooming and shape of flower this is identical with C. Rambler, differing only in color, which in Thalia is a pure, clear white.
Yellow Rambler (Aglaia)-A new, hardy yellow climbing rose, blooming after the same manner as Crimson Rambler in clusters; flowers of medium size in immense clusters; very sweet scented. Color a clear yellow.

White Dorothy Perkins-See Wichuraiana Roses.
PRAIRIE ROSES - Rosa Setigera
This class is perfectly hardy and requires no protection. Strong plants . ...................................30 $\begin{array}{rlr}\text { Each } & \text { Per } 10 & \text { Per } 100 \\ \$ 2.50 & \$ 20.00\end{array}$

## Baltimore Belle-Nearly white with a faint blush. <br> Queen of the Prairie-Large clusters of red flowers. <br> WICHURAIANA ROSES

This class of roses is admirable for covering trellises, walls, fences, trailing over rocky places, slopes, etc. Strong plants $\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots . . . \begin{array}{ll}\text { Each } & \text { Per } 10 \\ \$ 2.50 & \text { Per } 100 \\ \$ 20.00\end{array}$
Alberic Barbier-Creamy-white with canary-yellow center; buds orange-yellow. The flowers are semi-double in immense clusters. A very fine variety.
Dorothy Perkins-A splendid, new climbing rose. In foliage and habit of growth it is remarkably like Crimson Rambler; the flowers are double, of good size and borne in clusters. The petals are very prettily rolled back and crinkled; buds remarkably handsome; color a clear shell pink and holds a long time without fading.
Evergreen Gem-Yellow in bud opening to almost white and perfectly double; early flowering.

Lady Gay-Cherry pink, fading to soft white. The flowers in large, loose trusses, together with the buds and foliage, form a mass of beauty from base of vine to tips of branches.
Red Dorothy Perkins, or Excelsa (Walsh, 1909). (W).-It is a good deal to claim for a Rose, but we are within bounds when we describe Excelsa as a brilliant Crimson Rambler flower on glossy, varnished Wichuraiana foliage. The flowers are very double, produced in large trusses of thirty to forty, and almost every eye on a shoot produces clusters of flowers. The color is intense crimson-maroon the tips of the petals tinged with scarlet. The finest of al Crimson Ramblers.
3 -in. pots, ready April 15. ............................ . Each 40 cts.
Manda's Triumph-Large clusters of double white flowers; sweetly scented.
South Orange Perfection-Soft pink or blush, changing to white.
White Dorothy Perkins-Identical with that favorite rose, Dorothy Perkins, excepting that it is white. It has no rival as a white climber. You should try it
Wichuraiana-Strong grower in any soil. Flowers single, pure white, in great profusion during the month of July.

## NOISETTE ROSES - Rosa Noisettiana

Strong plants ........................Each \$0.30 Per 10 \$2.50
Climbing American Beauty (Hoopes Bros. \& Thomas, 1911). (H. N.)-A seedling from American Beauty with Wichuraiana and Tea blood in its veins. Same color, size and fragrance as American Beauty, with the addition of the climbing habit. Good foliage, and better blooming qualities. One plant of this new Rose will produce twenty times as One plant of this new Rose will produce twenty times as many fowers in June as the old America
blooming occasionally during the summer.

3-in. pots, ready April 15..................................Each ${ }^{2} 50$
Mary Washington-Flowers pure white, perfectly double, sweet and borne in endless numbers in large clusters all summer. Vigorous grower.

William Allen Kichardson - Very deep orange-yellow; medium size, but extremely showy and distinct; very attractive.

## MOSS ROSES - Rosa Mucosa Bifera

This class has always been a favorite in old gardens. There is nothing prettier than the Moss rose when in bud and the delicious fragrance. Perfectly hardy.
Strong plants .................................... $\$ 0.35$ Per $10 \$ 3.00$
Henri Martin-Large full flower, deep red; well mossed; fragrant.

Madame Louis Levecque-This is a grand new Moss rose; large, full, delicate flesh, deeper in the center; fragrant; splendid; well mossed. Resembles Captain Christy in color.

Mousseline-Pure white flower; buds heavy and beautifully mossed.

## ROSA RUGOSA

This class of roses is especially adapted to hedges, or for shrubbery collections, the splendid foliage, the flowers and later the seed pods, makes this class one that should be more largely used in landscape work.
Strong Each Per 10 Per 100 Blan plants ............................35 $\$ 3.00$ Per-white Blanc de Coubert-Pure paper-white, semi double; very good. Poitevine-Deep rosy-pink with purplish cast, good buds.

Conrad F. Meyer-Large double flowers, clear silvery pink, extra fine.

Rugosa Alba-Single pure white.
Rugosa Rubra-Single deep rosy-carmine.

## AUSTRALIAN ROSE - Rosa Lutea

Strong plants ..........................Each \$0.35 Per $10 \$ 3.00$

## Select Hardy Perennials

Although popularly known as old-fashioned plants, Perennials have never been so popular as they are at the present time, and we feel safe in saying that a permanent taste has been developed which is certain to continue and make Perennials as popular in the United States as they have been in the horticultural centers of Europe for many years. Cultivation is of the simplest, beginning with any good soil for a foundation, which may be enriched with any good fertilizer, such as well decomposed cow manure or bone meal, deeply dug, well pulverized, in season as early as possible, so as to enable them to become well rooted and established before hot, dry weather sets in, keeping the ground well stirred, and where it is convenient to water beds during hot, dry weather, a mulch of any loose material, which will keep the soll from bakit is convenient to water beds dur
ing will be found very beneficial.

Short grass, the rakings of the lawn after cutting, will be as good for this purpose as anything.
A covering of manure should be applied in the fall. This may be forked into the soil early in the spring, beyond this, little care need be given, the occasional staking of a plant, the cutting off of decaying flowers, which will prolong the flowering season of many species, and the dividing and replanting occasionally of such varieties that have become too large, being all that is needed.

The following list has been made with special pains as to worthy varietles, large range of colors and different styles of growth.

We shall endeavor to add yearly to our list any varieties that we think worthy and disoard such as we think undesirable:
For such of our customers, who are not acquainted with the different varieties, we offer the following "Special Collections", all good strong plants, which will keep the garden gay with flowers from early spring to late in the fall.

WEBER'S SPECLAL PERENNIAL COLLECTIONS.

## General Descriptive List of Hardy Perennial Plants

NOTE-All orders for Perennial plants will be shipped at the proper time for planting, unless instructed to the contrary. You will do far better to let the Nurseryman decide as to the best time to plant. We will, however, comply with your wishes, regarding shipment, as far as possible and where stock is ready.

## ACANTHUS - Bear's Breech

Handsome decorative plants, with broad foliage and of stately effect, either for planting as single specimens on the lawn or in the border, or for grouping with other plants for sub-tropical effect, producing their 3 feet high spikes of curious flowers during August and September.

. . \$1.25

## CHRYSANTHEMUM - Moonpenny Daisy

C. Maximum "Triumph"-A free-growing plant, not exceeding 3 feet in height; in bloom from early July until October. Flowers Daisy-like, 3 inches and over in diameter, pure white, with a golden center; of great substance; will last a week or more when cut.
Each.................. $\$ 0.15$ Per 10. . . . . . . . . . . . . . . . . $\$ 1.25$
C. Burbank's Shasta Daisy "Alaska"-An improvement on the original, very free flowering, blooms $4 \frac{1}{2}$ to 5 inches across, of pure white.
Each..................... 0.20 Per 10........................ $\$ 1.75$

## CHRYSANTHEMUM - Hardy Pompone

This class of beautiful plants is now so universally popular for out-door bedding, and justly so. They produce a lavish profusion of blooms, giving color, life and beauty to the garden at a time when other plants have been nipped by frost. They are quite hardy. but it is well to give a slight covering of leaves or manure during winter. Grows from 2 to 3 feet high.

Baby-A miniature flower; color lemon-yellow.
Cerise Queen-Cerise pink.
Cagle de Or-Fine golden yellow.
Golden Queen-A fine yellow.

## CHRYSANTHEMUM-Continued.

Golden Fleece-Clear yellow.
Julia Lagravere-Rich garnet.
Princess of Wales-A fine white.
President-Rich purplish crimson.
Queen of Bulgaria-Rich rose-crimson.
Soeur Melanie-Pure white.
Strathmeath-Rosy pink.
Victor-Rosy crimson.
Each.

## CHRYSANTHEMUM - Old-Fashioned Large- <br> Flowering

Of late years there has been a demand for the large-flowering old-fashioned varieties of Chrysanthemums, that were at one time found in every garden.

We have secured a limited stock of the following varieties.
C. Autumn Glow. Rose-crimson.
C. Indian-Indian-red.
C. Golden Queen-Yellow.
C. Old Homestead-Pink.
C. Victory-White.

Each................... 0.15
Per 10.

## CHRYSANTHEMUM - English Collection

For a number of years we have been trying to get a set of this beautiful fall blooming plant that would produce larger individual flowers than the Pompons and come to blooming earlier in the season. The following are all fine varieties.
C. Bride of Keston-Deep pink.
C. Estolb Yellow-A fine yellow.
C. Goaches Crimson.-Bronzy-crimson, outer petals shading to yellow.
C. La Parisiene-A fine white.
C. R. Pemberton-Bronzy-yellow.
C. Vivian Prince-Yellow.

Each, 20 cents; the "Collection" of six varieties, 1 each for $\$ 1.00$.

## CLEMATIS - Shrubby

C. Recta-A fine variety, growth erect, with handsome pure white flowers in large, showy clusters; June and July; 2 to 3 feet high.
Each. . . . ............... $\$ 0.25$ Per 10...................... . $\$ 2.25$

I. Shakespeare-Standards straw-yellow, veined with burnt umber; falls deep carmine violet.
I. Spectabilis-Light and deep violet-purple.

Price-Any of the above, except otherwise noted, each, 15 cts.; per $10, \$ 1.25$; per $100, \$ 10.00$.

## IRIS KAEMPFERI - Japanese Iris

These magnificent Irises are among the most beautiful of our summer-flowering plants, and are destined to become more popular every season. They commence blooming about the middle of June and continue in bloom for five or six weeks. Many of these flowers measure from 10 to 12 inches in diameter, and rival the orchids in their rich colorings and markings. While the Iris succeeds in almost any soil, and under any conditions, they delight in a rich, deep, wet position, and should be abundantly supplied with manure and water. Grow about 30 to 36 inches high.

## SIX-PETALLED VARIETIES

No.
5-Koki-no-iro-Rich royal-purple with white veinings. 10-Shiga-no-ura-nami-Violet purple, veined white.
25-Senjo-no-hora-One of the most beautiful mottled varieties, six large petals, evenly variegated throughout with white and deep purple, which is so intense as to give the flower a dark crimsonl reflex.
29—Rish-no-tomi-Silvery white veined and dotted violetblue.

Selma (Tall)-Large flower, pale rose-mauve, with claretred eye.
Each.................... $\mathbf{\$ 0 . 2 0 ~ P e r ~ 1 0 . . . . . . . . . . . . . . . . . . . . . . . . ~} \$ 1.50$
Vesuvius (Medium)-Pure red, with bright purple eye, a dazzling color.

Von Goethe (Medium)-Tyrian-rose, suffused with carminelake, and carmine eye.

Von Hochburg (Medium)-An ideal crimson; the richest of its color.

Von Lassburg (Medium) -The purest white, flowers larger than any other white.

## PHLOX SUFFRUTICOSA

## Early Flowering Hardy Phlox

Miss Lingard-A very fine white variety; begins to flower after the middle of June and continues throughout the season. Largely used for cut flowers. Each. .................... $\$ 0.20$ Per 10
. $\$ 1.50$

## PHLOX DIVARICATA CANADENSIS

One of our native varieties that is but rarely met with, and which has been introduced in Europe the past few years as a novelty. A plant that is certain to meet with much favor when better known as nothing can produce such a favor when better known as nothing can produce such a cheerful corner in the garden in the very early spring; frequently beginning to bloom early in April, it continues until about the middle of June, with large, bright, lilac-
colored flowers, which are produced on stems about 10 colored flowers, which are produced on stems about 10
inches high, in large, showy heads, and are very fragrant. inches high, in large, showy heads, and are very fragrant.

## PHLOX SUBULATA - Moss or Mountain Pink

A pretty creeping type, with moss-like evergreen foliage, which in early spring is hidden beneath a mass of bloom. One of the very best plants in our collection for the rockery, and invaluable for covering graves or carpeting the ground. Grows about 6 inches high.
P. S. Lilacina-Light lilac.
P. S. Rosea-Bright rose.
P. S. Alba-Pure white.
P. S. Atropurpurea-Purplish-rose.

## Each.

## PHYSOSTEGIA - False Dragon Head

One of the most beautiful of our midsummer flowering perennials, forming dense bushes 3 to 4 feet high, bearing spikes of delicate tubular flowers, not unlike a gigantic heather.
P. Virginica-Bright but soft pink; 3 to 4 feet.
P. Alba-Pure white; very fine; 3 to 4 feet.

Each................... $\$ 0.15$ Per $10 . . .$.

## PINKS - Hardy Garden

Dwarf, hardy pinks, bearing double flowers of rich colors, decided improvements on the old sorts; 6 to 9 inches high. Each. . . . . . . . . . . . . . . . $\$ 0.15$ Per 10....................... . $\$ 1.25$
C. Comet-Bright rosy-crimson; a fine, large flower.
P. Delicata-Soft, pleasing, delicate rose.
P. Elsie-Bright rose, maroon center.
P. Her Majesty-Large flowers of purest white.

## PINKS-Continued.

P. Homer-Rosy-red with dark enter.
P. Juliette-White, laced crimson.
P. Souv. de Salle-Soft rosy-red.
P. White Reserve-A nicely fringed pure white.

## PLATYCODON - Balloon Flower, or Japanese Bell Flower

P. Grandifiorum-Deep blue, cupped, star-shaped flowers; $11 / 2$ to 2 feet.
ach..........
P. Grandifiorum Album-An extremely pretty white variety; blooms from June to October; $11 / 2$ to 2 feet. Each.................... $\$ 0.15$ Per 10......................... $\$ 1.25$
P. Mariesi-Deep blue bell-shaped flowers, nearly 3 inches across on 1 ft . high plants $\qquad$

## PLUMBAGO - Lead-Wort

P. Larpentea-Of dwarf, spreading habit, growing 4 to 6 inches high, useful as an edging plant or for the rockery: covered with beautiful deep blue flowers during the sumcovered with beautifu
mer and fall months.
mer and fall months.
POLYGONUM
P. Compactum-A variety which is deserving of great popularity. It grows about 15 inches high, and during popularity. It grows about 15 inches high, and during
August and September the entire plant appears as a foamy mass of white flowers.
Each.

## PRIMULA - PRIMROSE

P. Cortusoides Seiboldii (Japanese Primrose)-These are not so well known as they deserve; they are of free, vigorous growth, with dark green follage and throw up in late spring innumerable stems of large flowers, varying in color from pure white to rich crimson; 8 to 10 inches high Each................... $\$ 0.20$ Per 10........................ $\$ 1.75$
P. Veris Superba-A glant-flowered form of the English cowslip, producing individual flowers from 1 to 2 inches across, in heavy trusses, which measure from 10 to 15 inches in circumference; color bright canary-yellow, with a golden in circ.
center................ . $\$ 0.15$ Per 10. . . . . . . . . . . . . . . . . . $\$ 1.25$ PYRETHRUM
P. Hybridum Fl. Pl.-Too much cannot be said of this grand hardy perennial. No class of plants gives a wider range of colors, while the form and substance of the flowers is all that could be wished. Their main season of blooming is in June; but if the old flower stems are removed they will give a fair sprinkling of flowers in the autumn. The bloom is similar to that of an aster, and ranges in color from pure white and yellow and the various shades of pink and red to deep purple. The plants we offer are seedlings grown from an extra select strain. Each...................\$0.15 Per 10........................ $\$ 1.25$
P. Uliginosum (Giant Daisy)-Grows 4 to 5 feet high and is covered with large white, daisy-like flowers, 3 inches in diameter, from July to September.
Each....................... $\$ 0.15$ Per 10
\$1.25

## RANUNCULUS - Crow-Foot

R. Repens Fl. Pl. (Bachelor's Button)-A pretty double flowering, bright golden yellow Buttercup. Grows $21 / 2$ feet high and blooms during May and June.
Each................... $\$ 0.15$ Per 10....................... ${ }^{2} 1.25$

## ROSEMARINUS - Rosemary

R. Officinalis-An old favorite aromatic herb of neat habit of growth; requires protection in winter; 18 to 24 inches high.
Each....................... 0.15 Per 10....................... $\$ 1.25$

## RUDBECKIA - Cone Flower

R. Laciniata-A glorious plant. and one that should find a place in every garden. Without question the best hardy plant introduced in many years. It is of flne habit and vigorous growth, attaining a height of from 4 to 6 feet, and begins to flower early in the season, and continues until late in the fall. The flowers are produced in enormous quantities on long stems, and resemble a fine double goldenyellow cactus dahlia, and as a cut flower for vases, etc., yellow cactus has no equal.
it has no equal. $\quad$ Each....................... 0.15 Per 10.
. $\$ 1.25$
R. Purpurea (Giant Purple Cone Flower) Flowers about 4 inches across, of a peculiar reddish-purple, with a remarkably large cone-shaped center of brown, thickly set with golden tips in spiral lines; forms bushy plants from 2 to 3 feet high, and blooms from July to October.
Each.................. $\$ 0.15$ Per 10.......................... $\$ 1.25$

## Canna

Each Per 10 Per 100 Strong, dormant roots, assorted varieties. $\$ 0.15 \quad \$ 1.25 \quad \$ 10.00$ Strong plants, started in pots, ready

May 1st .................................... . . 20 1.7515 .00
Alsace-Dainty, medium sized flowers of sulphur-white; $41 / 2$ feet.

Ami Pichon-Velvet red; 4 to $41 / 2$ feet.
Beaute Pointevine-Bright crimson; 3 to $31 / 2$ feet.
Black Prince (Green-leaved)-A tall growing sort with fine, showy flowers of crimson; dark foliage, heavily ribbed and margined chocolate; 4 ft .

Buttercup-Deep buttercup-yellow, almost pure; very effective; 3 ft .

Chas. Henderson-Crimson; 3 to $31 / 2 \mathrm{ft}$.
Duke of Marlborough-Deep crimson; 4 to $41 / 2 \mathrm{ft}$.
Express-Foliage wide-spreading and low, 2 to $21 / 2$ feet high; literally crowned with massive flat heads of bloom, rich vermilion.

Francis Willard-Dark red, mottled deep red; 3 to $31 / 2$ feet. Florence Vaughan-Yellow, spotted red, 3 to $3 \frac{1}{2}$ feet.
Fuerst Bismarck-Rich scarlet crimson, of large size; $3 \frac{1}{2}$ feet.

Hofgartner Hoppe-Foliage clean dark bronze; flowers tawny red, mottled with crimson and golden throated; 4 to 5 feet.
J. D. Eisele-Bright vermilion scarlet, overlaid with orange; a fine bedder; $31 / 2$ feet.
King Humbert-In this grand Canna we have a combination of the highest type of flowers with the finest bronze foliage. Its flowers measure 6 inches in diameter, produced in gigantic trusses, a brilliant orange scarlet, with bright red markings; foliage broad and massive, of a rich coppery bronze; 5 feet.

La France-Bronze-leaved, deep red salmon mottled throat; 4 to $4 \frac{1}{2}$ feet.

Louisiana (Orchid-Flowering)-Soft, glowing scarlet, with orange throat markings; 6 feet.
Mme. Crozy-The popular golden edged, bright scarlet; 4 feet.

Mlle. Berat-The nearest approach to a pink in a firstclass bedder; 4 feet.

Pennsylvania-Five feet; green foliage; flowers extra large; deep red, of solid color; 5 to 6 feet.

Philadelphia-Bright glowing red, rich velvety; 2 to $2 \frac{1}{2}$ feet.

President Myer-Handsome bronze and sepia foliage. Flowers large, in wide trusses, cherry-carmine; 4 feet.

Queen Charlotte-Makes a gorgeous display when planted in masses. Color a wide ragged band of yellow, bordering a center of scarlet, suffused carmine; $31 / 2$ feet.

Rubin-The ruby carmine flowers of this are not large, but are produced in profusion and are intensely rich and
glowing, which, combined with the dark, bronzy green foliage, make it one of the best bedding varieties in our collection.
Richard Wallace-As a good, free-flowering yellow Canna of vigorous growth we believe that this variety comes nearer to the ideal than any variety yet offered. In color it is a pleasing canary-yellow, with exceptionally large flowers, which are carried well above the foliage; $41 / 2$ feet.

Rose Unique-Rose; $31 / 2$ to 4 feet.
Souvenir d'Antoine Crozy-Intense crimson-scarlet with a broad golden-yellow border; an exceptionally free-flowering variety, and the brightest of the gilt-edged sorts; $31 / 2$ feet.

Venus-One of the softest and most delicately colored varieties that has yet been introduced. The flowers are of fair size, of a soft rosy-pink, with a pretty mottled border of creamy yellow; $31 / 2$ feet.
Wm. Greisinger-Full spikes and well opened flowers of bright yellow, thickly studded with scarlet. The center petal is all red, the lower petals red, broken up throughout by wavy threads of gold; 3 to 4 feet.

## Dahlia

The Dahlia has come to the front as one of the most important summer and autumn flowering plants.
We have endeavored to get together a short list of the very best sorts of recent introduction and of distinct colors. Our Dahlias are grown from "divisions," and all orders are supplied with strong dormant roots in the spring.
Dormant roots, in assortment........... $\$ \mathbf{~ E a c h}$ Per 10 Per 100
C. W. Bruton (Decorative)-A fine bright yellow.

Catherine Duer (Decorative)-Irridescent geranium red; a great favorite.

Grand Duke Alexis (Quilled)-Large, massive flowers, ivory white, with a faint tinge of rose at the extremities of the petals.

Kriemhilde (Cactus)-Flowers perfect, on long stems; color a brilliant pink, gradually shading to white at the center. A popular cut-flower sort.
Maid of Kent (Decorative)-Intense scarlet, variegated with pure white; frequently a solid scarlet.

Mrs. Dexter (Show) - A rich shade of salmon, best of its color.
Mrs. Winters (Decorative)-A large, finely formed snowwhite; a grand cut-flower.

Mrs. Roosevelt (Quilled)-Very large, perfectly double; color delicate silvery rose.
Snow (Show)-A beautiful pure white; long stem; excellent as a cut-flower variety.

Wilhelm Miller (Decorative)-Rich, deep aniline red, suffused with purple.

## Gladiolus

We offer this year the "Groff Gold Medal Mixture." This mixture contains select varieties with great diversity in color, ranging through all the shades of Red, White, Yellow, Blue, etc.
Each.... $\$ 0.08$ Per doz...... $\$ 0.75$ Per 100.... \$6.00
If wanted by mail add 10 c per doz. to cover postage.

## Tuberoses

One of the most delightfully fragrant and beautiful of the summer-flowering bulbs. For out-door planting set bulbs about May 10 th to 15 th, after danger of frost is over.

Double Pearl-The best double variety.
Single-The old-fashioned single.
Each.....\$0.04 Per doz......\$0.30 Per 100....\$2.00

## Cut Flower Department

This department is in charge of our Walter T. Weber, who is a practical grower of cut-flowers. We would be pleased to have our customers favor this department when in need of anything in that line.

We make up designs for all occasions, can ship by Express if outside of St. Louis, or we deliver by messenger to any part of the City of St. Louis.

The best way to order is to tell us what the flowers are to be used for and state the amount you care to spend, leaving the selection to us as much as possible; we will endeavor to please you.

In ordering funeral designs always state amount you wish to pay and the design you wish; we will then make up as large a piece as we can afford for the money.

All orders by Telephone or Telegraph will be shipped C. O. D., unless the parties have an established credit with our bookkeeping department. All cut-flower orders are due the 5 th of the month following purchase.

Our Phone number is Bell South 897. Direct wire with South Branch, St. Louis. Kinloch, Long Distance, Affton 804.
NO ORDERS ACCEPTED FOR LESS THAN \$1.00.

# Bulbs for Fall Planting 

Supplied on Orders Only. Express or Postage Charges to be Paid by Purchaser. Select Mixed Hyacinths

By Mail 1c Each, Extra for Postage.
Out-Door Culture in Beds or Borders-The bulbs may be planted almost any time in Ootober until the ground is frozen solid. They succeed in any good, well drained garden soil, which should be well spaded, and will be better if some wellrotted manure is mixed through it. Set the bulbs so that tops will be between four and five inches below the surface and four to six inches apart.

Pot Culture in the House-Plant from September to December in rich, sandy loam, in four or five inch pots, inserting the bulb so that its top will be just below the surface. Do not pack the soil in the pots as the bulbs will be more likely to push out when the root growth commences, if the soil is loose. Water thoroughly and set the pots away in a cool, dark place for several weeks. If cold coffee is used occasionally instead of water it will often increase in intensity the coloring of the flowers. Keeping in the dark will allow the roots to grow and become firmly fixed in the soil, when the plants can be brought into the light and will at once commence the top growth. By bringing the pots ints the light at different times, something of a succession of bloom may be had. During their growth they should be kept near the light and at a temperature of 50 to 70 degrees and watered frequently.

La Virginite-Blush white, good bells and truss.

## Double Blue

Bloksberg-Bright porcelain striped, large truss. Garrick-Fine bright blue, good bells, handsome truss.

## Double Yellow

Goethe-Fine yellow.

## Tulips

By Mail, 10c per dozen extra.
The culture of Tulips is the same as that of Hyacinths, except that the bulbs should be planted two to six inches apart. Tulips are perfectly hardy, so only a slight protection is required.

It is difficult to conceive of anything more brilliant in color than a bed of good Tulips. Their great variety of color, intense brilliancy and beautiful shading, make them universal favorites, and they can be cultivated easily, only requiring good, common garden soil to grow them to perfection. There are no bulbs which make such a rich and gorgeous display of blossom with so little care and cultivation.

## Early Single Tulips

## Snow Drops

The first flower of spring is the delicate Snow Drop, white as snow. Its appearance is a joyful surprise.

Plant in the fall, in beds or masses of a dozen or more, about one inch apart, and three inches deep. Desirable for growing in pots, etc., in the house in winter.
A dozen may be planted in quite a small pot or saucer. A few planted on the lawn produces a flne effect early in the spring before the grass will need cutting. Perfectly hardy, and bulbs can remain several years without removing.

## Chinese Sacred Lily

This is a variety of Polyanthus Narcissus cultivated by the Chinese from time immemorial for the purpose of decorating their sacred temples or Joss Houses, and to hail the advent of their New Year's day which occurs in February.
The flowers are pure silver white with golden yellow cups and exquisite fragrance. The great wealth of dark green leaves adds much to the beauty and fully completes the pic-

## Freesia

Bears peculiar clusters of flowers of the most delicious fragrance which lasts a long time even after being cut. Forces easily and will come into bloom in January and February. It also grows well and blooms freely in an ordinary sitting room if placed near a window, and not kept too warm. Will stand a slight freezing without injury. It appears to the best advantage when four or five bulbs are set in a six-inch pot in light rich soil.
